PREFACE

The Fact Book presents pertinent data about the individuals served by the Department of Developmental Services (DDS), including an overview of services and trends in California. We hope you find this information useful in better understanding California’s developmental services system and the people served.

DDS is responsible for administering the Lanterman Developmental Disabilities Services Act (Lanterman Act) and the Early Intervention Services Act. These laws ensure the coordination and provision of services and supports to enable people with developmental disabilities to lead more independent, productive, and integrated lives. In addition, these laws ensure the delivery of appropriate services to infants and toddlers at risk of having developmental disabilities. DDS carries out its responsibilities through 21 community-based, non-profit corporations known as “regional centers” and four State-operated facilities, including three developmental centers and one smaller state-operated community facility. For purposes of this publication, the smaller facility is included in numbers reported for developmental centers.

A “developmental disability” is a condition that originates before an individual reaches age 18; continues, or can be expected to continue indefinitely; and constitutes a substantial impairment in three or more areas of major life activity.* Developmental disabilities include Intellectual Disability, Autism, Epilepsy, Cerebral Palsy, and disabling conditions closely related to Intellectual Disability (formerly Mental Retardation) or requiring treatment similar to that required by people with Intellectual Disability. The service delivery system, which offers personalized supports, includes individuals with developmental disabilities, their families and/or legal representatives, advocacy and professional organizations, the State Council on Developmental Disabilities, direct service providers, developmental centers, regional centers, and DDS.

The following pages offer a look at the demographics and characteristics of people served by DDS. The Fact Book and other information are available on the DDS website. Information in this publication was derived from data reported electronically to DDS Headquarters and compiled by the Data Extraction Unit.

The Facts and Stats web page on the DDS website contains information about DDS caseload, client characteristics, and other data available.

*Areas of major life activity include self-care, receptive and expressive language, learning, mobility, self-direction, capacity for independent living, and economic self-sufficiency. Substantial impairment reflects the person’s need for a combination of special, interdisciplinary, or generic support services.

Yelena Zhukova

Cover Art: Love and Sunset was one of the first large-scale collage pieces that Yelena attempted and successfully executed. Over the last few years, Yelena has experimented with nearly every creative medium Southside Art Center has to offer. Although she considers herself primarily a ceramicist and painter, she has successfully explored and executed digital, wire sculpture and collage mediums. Her works often follow themes of friendship and the natural world around her. Aside from the use of magazine and newspaper cuts, she added in both string and popsicle sticks to give extra depth and texture to the scene.

WHOM DDS SERVES

The Dream Visit to Mister Lion’s Den

Markell Mitchell

Markell is a self-taught multi-media artist who typically focuses on the use of acrylics, graphite and a variety of coloring pigments. The themes of his works are usually inspired by the imagery of video games, graphic novels and film. This specific piece, titled *The Dream Visit to Mister Lion’s Den*, was however inspired by a dream he had. The original piece was developed first as a graphite sketch on wood and then further processed with acrylic paints. Aside from his talents as a gifted painter, Markell is also a skilled caricature and budding comic book artist who is currently working on the first issue of his debut comic *Red Pig Man*. 
The source of the data depicted in the Caseload charts is the Client Master File (CMF). Information on a person is initially entered into the CMF at the time of application for regional center services. The CMF is the primary source for demographic, case status, and service coordinator information. The definitions of status codes are as follows:

**Intake and Assessment (Status Code 0):** An applicant for regional center services who is being assessed for eligibility.

**Prevention (Status Code P):** Children birth to age three who are diagnosed with genetic, medical, developmental, or environmental history that is predictive of a substantially greater risk for developmental disability than that of the general population. The Prevention Program was added as a new population category on October 1, 2009 and ended on September 30, 2012.

**Early Start Program (Status Code 1):** Children birth to age three with a developmental delay or disability, or an established risk condition with a high probability of resulting in a delay. Children with a Status Code 1 qualify for early intervention and family support services.

**Active Consumer (Status Code 2):** People diagnosed as having a developmental disability who are served in the community (not in a developmental center).

**Developmental Center (Status Code 8):** People diagnosed as having a developmental disability who are served in a developmental center.
CASELOAD

The number of people served by DDS (i.e., Intake and Assessment, Early Start Program, Active Consumer, Developmental Center on the Client Master File) increased 37.7% from January 1, 2004 to January 1, 2014. According to Department of Finance estimates, California’s general population grew 8.3% between March 1, 2004, and July 1, 2014. About 0.7% of California’s population was served by DDS as of July 1, 2014.

DEMOGRAPHICS FOR CONSUMERS SERVED BY DDS

In the pages that follow, demographic information is provided by gender, age, residence types, ethnicity, and primary language of Early Start, Active Consumers, and developmental center consumers as of January 1, 2004, as compared to January 1, 2014. To obtain demographic information on the population served by DDS for other years, please refer to prior editions of the Fact Book.

Residence Type

Changes in the residence types of the population are noteworthy. While 71.0% of the people resided in the home of a parent or guardian in January 2004, 76.2% had this residence type in January 2014. During this same period, decreases continued in the proportion of people living in community care settings (13.6% to 10.5%) and developmental centers (1.8% to 0.5%).

Definitions of Residence Types

Own Home-Family: Home of a family member or guardian.

Community Care: Settings such as Community Care Facilities (CCF), Foster Homes for Children, and Family Homes for Adults (FHA).

ILS/SLS: Independent Living Setting (ILS) or Supported Living Setting (SLS).

SNF/ICF: Skilled Nursing Facility (SNF) or Intermediate Care Facility (ICF). ICF includes ICF/Developmentally Disabled (ICF/DD), ICF/Developmentally Disabled-Habilitation (ICF/DD-H), and ICF/Developmentally Disabled-Nursing (ICF/DD-N).

Developmental Center: Developmental Center operated by DDS.

Other: Settings such as Hospitals, Community Treatment Facilities, Rehabilitation Centers, Psychiatric Treatment Centers, Correctional Institutions, and other settings in the community.

Age Distribution

Age distribution trends for people served by DDS also continued. With 56.6% of the population under 22 years of age in January 2014 as compared to 56.1% in this age group in January 2004, the DDS population is becoming slightly older.

January 2004 to January 2014
Ethnicity

The predominant trend in the ethnic makeup of the population continued in 2014. Hispanics remain the fastest growing segment of the DDS population, increasing from 27.8% in January 2004 to 36.1% in January 2014. Over this same period, the white population decreased from 43.1% to 34.6%.

Figure 4

Number of Consumers by Ethnicity
January 2004 to January 2014
Gender

The trend in the gender distribution of people served by DDS continued in 2014 with males increasing in numbers relative to females. In January 2004, 59.8% of the people served were male as compared to 40.2% female. In January 2014, the gap widened to 63.6% male compared to 36.4% female. The growing gender imbalance is due, in large part, to the growing Autism population, which is currently over 80% male.

RESIDENCE TYPES OF CONSUMERS WITH DEVELOPMENTAL DISABILITIES, BY AGE GROUP
JANUARY 2004 AND JANUARY 2014

During the period from January 1, 2004 to January 1, 2014, the percentage of consumers served by DDS in both the “Birth through 17” and “18 and Older” age groups increased for those residing in the home of a parent, guardian, or conservator (labeled “Own Home-Family” in the tables below) and decreased for those residing in community care settings and developmental centers. These changes are consistent with the high priority the Lanterman Act places on providing opportunities for children with developmental disabilities to live with families and for people of all ages to live in home-like environments.

The percentage of people 18 years of age and older residing in supported living and independent settings also increased between January 2004 and January 2014. This change follows the Lanterman Act’s direction to provide “opportunities for individuals with developmental disabilities to be integrated into the mainstream of life in their home communities, including supported living and other appropriate community living arrangements.”

January 2014
GENDER AND AGE AT TIME OF INTAKE AND ASSESSMENT PROCESS INTO DEVELOPMENTAL SERVICES SYSTEM

The gender and age of individuals at the time of intake (based on the first CMF date) were analyzed for people who entered the developmental services system during the ten-year period from January 1, 2004 to January 1, 2014.

Of the 8,945 individuals who received intake and assessment services as of January 1, 2014, 25.4% were ultimately determined eligible to receive Early Start Program services and 30.0% were eligible to receive services as Active Consumers.

The remaining individuals were determined to be ineligible to receive regional center services.

Gender

The percentage of the male population engaged in intake increased from 65.2% in January 2004 to 70.1% in January 2014, while the percentage of the female population decreased from 34.8% to 29.9%.

Figure 6

Number of Consumers by Age Group
January 2004 to January 2014
CONSUMERS RESIDING IN A DEVELOPMENTAL CENTER

The Lanterman Act promotes the provision of services in the least restrictive environment and emphasizes community settings as the preferred living option for most consumers. In 1999, the United States Supreme Court issued a ruling that required the decreased dependency on institutional services.

Based on the principles in the Lanterman Act and the Supreme Court decision, the total developmental center population has been declining dramatically as the community system expands, from a high of over 13,300 residents in 1968 to 1,368 residents in January 2014. Because of this decline, DDS has closed four developmental centers and one state-operated community facility. Over the last five years alone, the total population served in DDS-operated facilities has decreased by more than 1,686 residents.

Table 11 provides the number of consumers and percentage of consumers residing in each developmental center (Agnews, Canyon Springs, Fairview, Lanterman, Porterville, Sierra Vista, and Sonoma). This information was collected from monthly CMF updates.

* As of December 31, 2014, no consumers reside at Lanterman DC.
DEFINITIONS

DDS collects data on the characteristics of the consumers it serves. The following tables and figures display information on the five major categories (Intellectual Disability, Autism, Epilepsy, Cerebral Palsy, or 5th Category) of developmental disabilities of consumers served by DDS from January 1, 2004 to January 1, 2014. Only people with a Client Development Evaluation Report (CDER) on file are included. The CDER file contains diagnostic and evaluation data including developmental, cognitive, behavioral, and medical information that is recorded when a person is given a client development evaluation. All individuals diagnosed with a developmental disability should have a CDER on file. For children under three years of age, a different, age-appropriate assessment tool called the Early Start Report is used instead of the CDER.

Definitions

Intellectual Disability is characterized by significant limitations both in intellectual functioning (i.e., an IQ of approximately 70 or below) and in adaptive behavior as expressed in conceptual, social, and practical adaptive skills. Levels of Intellectual Disability are reported here as mild, moderate, severe, profound, no ID (i.e., Intellectual Disability is not present), or unspecified.

Autism is a neurodevelopmental disorder with multiple etiologies defined as a syndrome causing gross and sustained impairment in social interaction and communication with restricted and stereotyped patterns of behavior, interests, and activities that appear prior to the age of three. The definition of Autism on the CDER has changed in the revised CDER. In the previous CDER, Autism was defined as consumers with Autism-Full Syndrome, Autism-Residual State, Autism Suspected or Not Diagnosed; in the revised CDER, Autism is defined as consumers with Autistic Disorder, Asperger Disorder, or Pervasive Developmental Disorder.

Epilepsy is defined as recurrent, unprovoked seizures. Seizures can cause loss of muscle control, tremors, loss of consciousness, and other symptoms. A modification of “International Classification of Epileptic Seizures” is employed for describing seizures.

Cerebral Palsy includes two types of motor dysfunction: (1) non-progressive lesion or disorder in the brain occurring during intrauterine life or the perinatal period and characterized by paralysis, spasticity, or abnormal control of movement or posture, which is manifest prior to two or three years of age, and (2) other significant motor dysfunction appearing prior to age eighteen.

5th Category is any developmental disability other than Intellectual Disability, Autism, Epilepsy, or Cerebral Palsy that is similar or closely related to Intellectual Disability, or which requires treatment similar to that required for individuals with intellectual disabilities. The revised CDER form now requires an explicit indication of 5th Category diagnosis, theoretically making the data more accurate, useful, and likely more fully reported.
TRENDS OF THE FIVE DEVELOPMENTAL DISABILITY CATEGORIES OF CONSUMERS WITH CLIENT DEVELOPMENT EVALUATION REPORTS ON FILE

The composition of the population by type of developmental disability shows some significant shifts from January 1, 2004 to January 1, 2014. For example, only 21.1% of the population served had “No Intellectual Disability” recorded on their Client Development Evaluation Reports (CDERs) in January 2004. By January 2014, the percent without Intellectual Disability had grown to 32.4%. During this same time period, the percentage of persons reported to have “Moderate”, “Severe” or “Profound” Intellectual Disability declined from a collective 33.5% to 24.7%.

The percent of the population with Epilepsy and the percent with Cerebral Palsy also declined over this period from 21.4% to 16.5% for Epilepsy and from 19.8% to 15.2% for Cerebral Palsy.

Two population categories showed an overall increase as a percentage of the population, with Autism increasing from 15.0% to 29.3% and 5th Category increasing from 9.7% to 10.2% from January 1, 2004 to January 1, 2014.

COMBINATIONS OF DEVELOPMENTAL DISABILITIES

It is common for a consumer to have a combination of two or more developmental disabilities (Intellectual Disability, Autism, Epilepsy, Cerebral Palsy, or 5\textsuperscript{th} Category) recorded on their CDER.

The majority of consumers with Intellectual Disability have only Intellectual Disability (58.4\%) recorded on their CDER as of January 2014. The percentage of consumers with Intellectual Disability who also have Autism increased from 8.0\% to 12.0\% from January 2004 to January 2014.

An even larger percentage of consumers with Autism have only Autism (86.6\%) recorded on their CDER as of January 2014. The percentage of consumers with Autism who also have Intellectual Disability decreased from 42.1\% to 35.6\% from January 2004 to January 2014.

A very small percentage of consumers have only Epilepsy (4.8\%) or Cerebral Palsy (11.2\%) as of January 2014. Most of the consumers with Epilepsy (56.9\%) or Cerebral Palsy (52.3\%) also have Intellectual Disability.

Consumers with 5\textsuperscript{th} Category have only 5\textsuperscript{th} Category recorded on their CDER 45.5\% of the time as of January 2014.

### Figure 16

Number of 5th Category Consumers with a Combination of Developmental Disabilities January 2004 to January 2014
Midnight Sunset

Ralph Sisler

*Midnight Sunset* is a recently produced mixed-media art piece created by Southside Art Center artist Ralph Sisler. The process was first started by sketching out the figurative images on wood using graphite pencils. Ralph then used a combination of acrylic paints and dyes to formulate the purple and pink tones of the background. Although much of the piece is colored with acrylic paints, Ralph decided to add cloth to accent the clothing of the male musicians. Ralph’s work is typically themed with the images of “golden age” musicians and film stars and has displayed in galleries throughout Southern and Northern California. He has earned himself a local following with collectors and has often times donated his work to annual KVIE Art Auction where it has been televised.
PERCENT OF CONSUMERS BY AGE GROUP RECEIVING REGIONAL CENTER-FUNDED SERVICES
OF ALL CONSUMERS SERVED BY DDS IN THE COMMUNITY
FY 2003-04 TO FY 2013-14

All consumers served by DDS receive case management services through their local regional center, regardless of whether they receive purchased services. Regional centers are required by law to provide or secure services in the most cost-efficient way possible. They must use all other resources, including those provided by other agencies, before using any regional center funds. When alternate sources are not available, the regional center purchases services as specified in the consumer’s Individual Program Plan (IPP) or the Individualized Family Service Plan (IFSP).

The percentage of consumers (all ages) receiving regional center-funded services out of all consumers served in the community (Early Start and Active consumers) fluctuated moderately from FY 2003-04 to FY 2013-14, decreasing from 78.6% of consumers served in the community to 77.8%. The percent of consumers (all ages) receiving regional center funded services decreased 0.2% from FY 2012-13 to FY 2013-14.

* Prevention consumers are included in FY 09/10, FY 10/11, and FY 11/12 only.
Community caseload (Prevention, Early Start Program, and Active Consumers on CMF as of the end of each FY) grew by 76,955 consumers from FY 2003-04 to FY 2013-14. By comparison, cumulative growth for Purchase of Service (POS) expenditures increased by $1,908.6 million over this period. Total POS expenditures leveled off from FY 2008-09 to FY 2010-11, reflecting state budget cuts.

In order to provide a comprehensive, detailed view of Service Categories, the following three tables focus on the information collected over the past five years.

**PURCHASE OF SERVICES EXPENDITURES**

Table 24 presents the POS Expenditures by Service Category from FY 2009-10 to FY 2013-14, along with the POS changes from FY 2012-13 to FY 2013-14.

Overall, the POS Expenditures increased $184.6 Million (5.0%) from FY 2012-13 to FY 2013-14. More than half of the service categories (20 of 25) showed an increase in POS Expenditures from FY 2012-13 to FY 2013-14.

Service categories with the largest POS Expenditure increase from FY 2012-13 to FY 2013-14 were Adult Day Programs, which increased $53.6 Million (6.5%) and Residential Services, which increased $32.9 Million (3.6%).

Table 25 presents the number of consumers receiving services by Service Category from FY 2009-10 to FY 2013-14, along with the changes in the number of consumers from FY 2012-13 to FY 2013-14.

Overall, the number of consumers receiving services increased by 9,708 (3.9%) from FY 2012-13 to FY 2013-14. More than half of the service categories (19 of 25) showed an increase in the number of consumers receiving the service from FY 2012-13 to FY 2013-14.

Service categories with the largest increase in the number of consumers receiving the service from FY 2012-13 to FY 2013-14 were Transportation, which increased by 5,253 consumers (7.0%) and Respite, which increased by 4,523 consumers (6.6%)

The service category with the largest decrease in the number of consumers receiving the service from FY 2012-13 to FY 2013-14 was Work Activity Programs, which decreased by 274 consumers (2.5%).

NUMBER OF VENDORS PROVIDING SERVICES

Table 26 presents the number of vendors providing services by Service Category from FY 2009-10 to FY 2013-14, along with the changes in the number of vendors from FY 2012-13 to FY 2013-14.

Overall, the number of vendors providing services decreased by 4,797 (9.6%) from FY 2012-13 to FY 2013-14. More than half of the service categories (14 of 25) showed a decrease in the number of vendors providing the service from FY 2012-13 to FY 2013-14.

The service category with the largest increase in the number of vendors providing services from FY 2012-13 to FY 2013-14 was Adult Day Programs, which increased by 52 vendors (2.6%).

Service categories with the largest decrease in the number of vendors providing services from FY 2012-13 to FY 2013-14 were Respite, which decreased by 2,352 vendors (52.1%) and Transportation, which decreased by 119 vendors (17.1%).

POPULATION AND PER CAPITA COST BY DEVELOPMENTAL DISABILITY AND AGE GROUP

As of July 2014, the majority of consumers with Intellectual Disability (62.4%), Epilepsy (69.9%), Cerebral Palsy (62.2%), or 5th Category (53.6%) were age 22 years or older, whereas the majority of consumers with Autism (81.7%) were 3-21 years of age.

The average per capita cost of consumers with each developmental disability category increased considerably after age 21. Specifically, Autism is the most expensive developmental disability per capita for all age groups compared with Intellectual Disability, Epilepsy, Cerebral Palsy, or 5th Category.

Expenditures for consumers typically increase after age 21 when Department of Education-funded services are no longer available, and out-of-home placement and day care services are needed. As the growing proportion of young consumers with Autism ages into adulthood, the projected impact on increasing costs is unknown, but may be significant.

Old Car Bustillos

Maria Bustillos

Maria had an extensive background in several mediums before she attended Southside Art Center. She is a highly productive artist who currently focuses her efforts on the mediums of collage and acrylics. Over the past year Maria has produced detailed collage works depicting historic figures such as Queen Elizabeth and Henry VIII, and has even tackled a rendition of the iconic The Last Supper. In Maria's collage work she adds a mixture of paper and recycled 3D elements in their construction to further texture her designs.
Age Wave Over the Past 20 Years

Over the past 20 years the success of the Early Start program and intake of school-aged children has resulted in a large overall growth in the 3-30 age group within this population. Note the tremendous growth in primary school-age consumers, as well as those in young adulthood. The rise of consumers ages 18-22 presumably comes from consumers transitioning to DDS from service in schools, as well as those needing housing and other adult services provided by DDS.

The over-30 population has remained essentially stable. Note the rightward population shifts due to aging, but otherwise modest growth. Consumers are living longer now in 2014, with the rapid decline due to mortality starting in the population’s late fifties, whereas the mortality decline in 1994 had started in the population’s forties.
