Message from the California Department of Developmental Services

Mission: The Department of Developmental Services (DDS) is committed to providing leadership that results in quality services to the people of California and assures the opportunity for individuals with intellectual/developmental disabilities to exercise their right to make choices.

This report contains the results of California's third yearly data collection cycle of the National Core Indicator (NCI) Adult Consumer Mover (M3) and Lanterman Mover (L3) Surveys. Data included in this report were collected between July 2012 and June 2013. During that time, 550 adults (age 18 and over) with intellectual/developmental disabilities, who moved from a developmental center to the community within the past 5 years, or who moved from Lanterman Developmental Center (LDC) since July 2009, provided their input or used a proxy through face-to-face interviews conducted by the State Council on Developmental Disabilities.

This is an important effort to collect accurate, reliable, and valid satisfaction and outcome data among individuals who have transitioned from developmental centers to the community (movers). The results assess key areas of interest including health and safety, employment, rights, service planning and delivery, community inclusion, and choice. The material presented in this report can be used as a tool by policy makers and other stakeholders to guide the planning and monitoring of community services during the closures of Sonoma Developmental Center, Fairview Developmental Center, and the general treatment area of Porterville Developmental Center.

This report is part of the Department's continuous effort to improve services and supports to all individuals with intellectual/developmental disabilities across California. Over time, results can be used to identify areas of strength and those in need of additional evaluation or systemic improvement.

Acknowledgements

This report would not be possible if not for the 550 individuals who agreed to offer their time and discuss their lives in order to assist in improving the services of people with intellectual/developmental disabilities who moved from developmental centers to the community in California. Additionally, special acknowledgment goes to the families, friends, and staff members who provided support and participated in the survey process.

List of Selected Abbreviations Used in the Report

ACS—Adult Consumer Survey

ASD—Autism Spectrum Disorder

CA-ODESA—California Online Data Entry Survey Application

CCF—Community Care Facility

CP—Cerebral Palsy

DD—Developmental Disabilities

DDS—Department of Developmental Services

FHA—Family Home Agency

HSRI—Human Services Research Institute

ICF—Intermediate Care Facility

ID—Intellectual Disabilities

ILS/SLS—Independent Living Skills/Supported Living Services

IPP—Individual Program Plan

L2—Adult Consumer Survey of individuals who have moved from Lanterman Developmental Center to the community (Lanterman mover) Subgroup FY 11/12 – Cycle 2

L3—Adult Consumer Survey of individuals who have moved from Lanterman Developmental Center to the community (Lanterman mover) Subgroup FY 12/13 – Cycle 3

M2—Adult Consumer Survey of individuals who have moved from a developmental center to the community (mover) Subgroup FY 11/12 – Cycle 2

M3—Adult Consumer Survey of individuals who have moved from a developmental center to the community (mover) Subgroup FY 12/13 – Cycle 3

NASDDDS—National Association of State Directors of Developmental Disabilities Services

NCI—National Core Indicators

OM3—All individuals identified as movers excluding the Lanterman movers; individuals who have moved from any developmental center to the community within the last five years (All Other Movers) and data collected in FY 12/13 (OM3)

SCDD—State Council on Developmental Disabilities

SNF—Skilled Nursing Facility

WIC—Welfare and Institutions Code

Organization of Report

This report, prepared by the Center for Human Services, University of California, Davis (UC Davis), presents findings from the third data collection cycle for the Mover and Lanterman Mover subgroups that are of interest to the Department of Developmental Services (DDS) and stakeholders.

The report is organized into the following chapters:

- I. Introduction: Provides a brief overview of the purpose of the report.
- II. Methodology: Explains the sampling design and data collection process used in administering the survey, and the statistical methods used to complete the analysis.
- III. Analyses by Mover Group: Presents demographic information and outcome results from the Adult Consumer Survey of FY 12/13 for individuals who have moved from a developmental center (M3). Data from the Adult Consumer Survey of individuals who have moved from a developmental center in FY 11/12 (M2) are presented for reference, although it is not possible to draw statistically significant comparisons between M2 and M3 given the sampling methodology.
- IV. Analyses by Lanterman Mover Group: Presents demographic information and individual outcome results for individuals who have moved from the Lanterman Developmental Center to the community on or after July 1, 2009 collected during the FY 12/13 data collection cycle (L3) compared to All Other Movers (OM3). Data on the Lanterman Mover Group from the FY 11/12 Adult Consumer Survey (L2) are presented for reference, although it is not possible to draw statistically significant comparisons between L2 and L3 given the sampling methodology.
- V. Appendices: Includes additional analysis information and relevant item-by-item results in table format.

I. Introduction

This report was prepared by the Center for Human Services at the University of California, Davis. The purpose of this report is to summarize the findings of the Adult Consumer Survey conducted during the 2012-2013 fiscal year. The survey sampled individuals who moved from a developmental center during the past five years, and all individuals who moved from Lanterman Developmental Center since July 1, 2009.

II. Methodology

This chapter summarizes information on survey administration, sample design, and methods for analyzing the data for specific subgroups.

Administration

Information for the Adult Consumer Survey (ACS) was collected via a direct conversation with the person receiving services, as well as the collection of background information from the individual's record. Section I questions were only allowed to be answered by the individual because the questions require subjective judgments and personal experiences. Section II of the Survey allowed for the use of "proxy" or other respondents who know the individual receiving services well and could observe the individual engaging in these activities (examples are family member, friend or support worker). Section II consists of questions regarding the individual's involvement in the community, choices, and access to services. Information about the protocols used to assure survey training and implementation was carried out in a valid and reliable way is provided in the main report compiled by HSRI.

Proxy Respondents

The use of proxy respondents is a consideration in the interpretation of survey responses among individuals with intellectual/developmental disabilities. Proxy responses may not be in full concordance with individual responses, but are an important information source. Studies have found the greatest discrepancies between individual and proxy responses occur when the information being collected is subjective (e.g., questions about how a person feels), in this situation proxies would only be aware of the correct answers if the individual had expressed his or her feelings previously.¹ Questions relating to observable behaviors tend to have higher levels of agreement between individuals and proxies. Without allowing proxies to respond, a higher percentage of individuals (most of whom are unable to respond) would be underrepresented by the data. Thus for NCI purposes, it was determined at the outset that proxy respondents would be used, but only for specific sorts of questions, and only

¹ Magaziner, Jay, Sheryl Zimmerman, Ann L. Gruber-Baldini, J. Richard Hebel, and Kathleen M. Fox. "Proxy Reporting in Five Areas of Functional Status Comparison with Self-Reports and Observations of Performance." *American Journal of Epidemiology* 146.5 (1997): 418-28.

in situations where the individual surveyed either could not effectively communicate with the interviewer or chose to have a proxy respond on their behalf.

The use of proxy respondents for the NCI tool is limited to questions in Section II, the scope of which relates to observable and/or measurable indicators: Community Inclusion, Choices, Rights, and Access to Needed Services. Information collected from state records, or reported by caregivers, family, or the individual, is used in the Background Section and relates to an individual's health status and exam history, qualifying condition, residence type, employment/day activity or program, and funding source information.

Some methods were used to reduce possible discrepancies between individual and proxy responses, such as making the questions as accessible as possible to increase participation by individuals and having a set of standards for proxy respondents. NCI aims to increase the accessibility of the Adult Consumer Survey by using easy-to-understand language and offering suggested rephrasing for questions that may be nuanced or more difficult to understand. The NCI project routinely revises the survey based on feedback from states, self-advocates, and interviewers who are administering the tool.

To increase the reliability of proxy responses, only people who know the individual well (such as a family member, friend, or support worker) served as proxy respondents. To avoid conflicts of interest, service coordinators are not allowed to respond as proxies. Further, if both the individual and a proxy respondent answer a question, the individual's answer is recorded if the interviewer deems the response reliable. Interviewers also keep track of who replies to specific questions—the individual or the proxy.

Sample Design

The overall approach to sample selection was to draw a “core sample” based on the minimum numbers needed to yield valid samples from each regional center. This sampling strategy is consistent with the criteria employed in other NCI states. For each regional center, DDS drew a random sample of individuals age 18 or older who received at least one service besides case management. Based on the adult population sampling frame numbers provided by DDS, a target minimum number of surveys was recommended per regional center in order to yield a representative sample that meets the standard of a +/- 5% margin of error and a 95% confidence level.

Mover and Lanterman Mover Sampling

The Department of Developmental Services (DDS) conducts the Adult Consumer Surveys annually with a random sample of people who transitioned from a developmental center (DC) to the community during the last five years (movers). In addition, all individuals who transitioned from the Lanterman Developmental Center to the community since July 1, 2009 were contacted to participate in the survey and included in the mover sample.

The percentage of the overall mover population sampled allows for statewide analysis of the group. The sample is not sufficient to conduct analysis at the regional center level.

Criteria for Excluding Responses

All persons selected in the survey sample had an opportunity to respond to questions in a face-to-face meeting. They were asked to participate regardless of their level of intellectual disability (ID) or ability to communicate. Section I was administered only to the person receiving services. A person's responses were excluded if any of the following criteria were met:

1. The individual responded to fewer than ten (10) questions in Section I.

2. The interviewer recorded that the person did not understand the questions being asked.
3. The interviewer recorded that the person gave inconsistent responses.

Section II allows for proxy respondents (e.g., family, friend, support worker). In the final analysis, if an individual's responses were excluded from Section I, his or her responses were also excluded from Section II, if the respondent was the only person to provide answers for Section II (i.e., without any proxies). Otherwise, all responses to questions in Section II were included in the analysis, regardless of the number of questions answered. Thus, the individual response rate to Section I was lower than the response rate to Section II due to stricter criteria for including Section I responses.

As shown in Table II-1 the sample sizes are provided for each of the subgroups for the respective section of the survey completed.

Table II-1: Sample Sizes for Each of the Subgroups

Group	Background	Section I	Section II
Mover FY 11/12 (M2)	816	241	812
Mover FY 12/13 (M3)	550	178	550
All Other Movers (OM3)	372	168	372
Lanterman Mover FY 11/12 (L2)	131	10	129
Lanterman Mover FY 12/13 (L3)	178	9	178

Data Analysis of Subgroups

The Center for Human Services, UC Davis performed the data analyses for this report. Results are presented by survey question in Sections III and IV. For each question, a corresponding bar chart is included for visual representation as well as a corresponding

table. Actual wording for survey questions can be read in the heading for each table. The bar chart and table display outcomes by response.

Results for M3

This report summarizes the data collected during the third data collection cycle of the mover group (referred to as M3). For the M3 analyses (Section III), the group consisted of a sample of 372 individuals (OM3) who transitioned from a DC other than the Lanterman Developmental Center to a community residence within the last five years and 178 individuals who moved from the Lanterman Developmental Center (L3) since July 1, 2009, making for a total sample 550 for the M3 subgroup.

Due to the nature of the study design, statistical testing between M2 and M3 was not conducted. Some of the study participants for M2 and M3 are the same people; however, there is not a way to match study participants' surveys from one year to the next. Because surveys are not linked year to year in order to ensure anonymity of the participants, the appropriate statistical calculations cannot be conducted. However, as a reference, data from the Adult Consumer Survey of individuals who have transitioned from a developmental center in FY 11/12 (M2) are presented.

Results for L3

As previously explained in relation to the samples for M2 and M3, it is known that many of the people sampled in L2 were also sampled in L3, making statistical testing between the groups inappropriate. Therefore, the alternate group of Other Movers (OM3) was constructed allowing statistical tests to be conducted for L3. OM3 is made up of the M3 sample, excluding movers from Lanterman DC, creating two separate samples without any overlap.

Subgroup comparisons were conducted between Lanterman movers (L3) and OM3. It is important to note the differences in ID when examining the results across the two subgroups. Eighty-eight percent of the L3 subgroup surveyed are individuals with severe and profound ID. However, 63% of OM3 surveyed are individuals with severe to profound ID. Also 81% of L3 used gestures/body language as the primary means of

communication compared to 63% of OM3. These differences may affect the results for many of the indicators.

In addition, many questions pertaining to Section I of the survey for L3 had fewer than 30 respondents. In instances where there were 30 or fewer valid responses, comparisons between L3 and OM3 were not conducted. The low proportion of respondents in the L3 group may be related to the higher proportion of individuals with severe to profound ID. The results for survey items that were excluded due to lower response rates can be found in the Appendices at the end of this report.

For significance testing between L3 and OM3 on categorical variables, chi-square tests were used and were significant at the $p < .05$ ¹ level. For questions with means, t-tests as well as fisher's exact tests were used and were also significant at the $p < .05$ level. The comparisons in this report are intended for use as a tool for understanding strengths and potential focus areas for system improvement. It is up to public managers, policymakers, and other stakeholders to decide whether the differences in the results suggest that quality improvement efforts or further investigation is necessary. These comparisons should be interpreted very broadly due to demographic differences discussed earlier in this section.

¹ The data from this report were collected by sampling from a greater population. When sampling, a p -value is established to identify when findings are significant. For this report, the p -value is set at .05 and findings less than .05 are considered significant.

III. Analyses by Mover Group

This chapter summarizes demographics and all outcomes for individuals who have moved from a developmental center to the community and were surveyed in the third Adult Consumer Survey FY 12/13 (M3). There were 550 individuals in the M3 group and 816 individuals in the M2 group. There are significant limitations in comparing M3 to M2: The groups have different profiles of individual characteristics, with there being more Lanterman movers in the M3 sample. Lanterman movers typically have a higher level of intellectual disability and less likely to use verbal communication. Therefore, these comparisons should be interpreted very broadly. As explained in the methodology section under the subheading of “Results for M3” it is not appropriate to conduct statistical comparisons between M2 and M3.

Important Data Notes:

Some questions were only asked depending upon previous answers (for example, only people who have a job in the community were asked if they chose their jobs). The text indicates when results apply to a more limited respondent group.

Some questions can only be asked directly of individuals receiving services, while others can be answered by a ‘proxy’ respondent (for example, a family member, friend, staff person, or someone else who knows the person well), or through state records.

Some response categories are collapsed (for example, results are combined for people who made a choice or had some input in making the choice). The table heading describes which response options are presented.

Appendices at the end of this report indicate survey section for each question.

Summary of Observations by Mover Group

All results are presented in a bar graph followed by a table with corresponding sample sizes for each question presented. The bar graphs compare results for individuals who have transitioned from a developmental center to the community and who were surveyed during the third cycle of the Adult Consumer Survey FY 12/13 (M3) to individuals who transitioned from a developmental center to the community and surveyed during the second cycle of the Adult Consumer Survey FY 11/12 (M2). There is a high probability that individuals surveyed in M2 were also surveyed in M3, as many of the individuals who are included in the sampling are the same year to year. Due to the nature of the study design, significance testing was not conducted.

Selected Key Findings

Demographics. In examining demographic differences between M2 and M3, percentages were higher for M3 for the following characteristics: identifying as White, having a legal/court appointed conservator, having cerebral palsy, having a profound level of intellectual disability (ID), having limited or no vision (legally blind), using gestures/body language, living in a CCF, and having a private agency lease the person's current home. For both M2 and M3, almost all of the respondents were single, never married, chose English as their preferred language and received 24-hour on-site support or supervision at their home. Both groups had similar percentages for the following characteristics: gender, average age, mobility, and average number of people with disabilities living in the home.

Choices and Decision-Making. In examining questions related to having some input or making choices, the following percentages were notably lower for M3: choosing or having some input in choosing how to spend money, choosing or having some input in choosing service coordinator, and choosing or having some input in choosing staff. Conversely, M3 had higher percentages for choosing or having some input in choosing their job, and in choosing or having some input in choosing their day program or activity. Both M2 and M3 had low and similar percentages (29% or less) for choosing or having some input in choosing the place they lived and the people they live with. Finally, both

groups had high and similar percentages (67% or greater) for deciding their daily schedule and how to spend their free time (77% or greater).

Employment and Other Daily Activities. In examining questions related to employment and other daily activities there were many notable differences in the percentages between M2 and M3. Percentages were noticeably higher for M3 for having a paid community job primarily with a group of people with disabilities, working more hours in a two-week period in a community-based setting, wanting a job in the community, and engaging in an unpaid activity primarily with a group of people with disabilities. Percentages were slightly higher for M3 for reporting to have a job in the community, working 10 out of the last 12 months in a community job, engaging in a facility-based setting as an unpaid activity and number of hours engaged in an unpaid activity in a community-based setting. Percentages were lower for M3 for having a paid job in a facility-based setting, the total gross wages earned from a paid job in the past two weeks in both a community-based and facility-based setting, and receiving regional center services or supports to participate in an unpaid activity in a community-based setting. Percentages between the two groups were fairly similar or equal for receiving paid vacation and/or sick time, attending a day program or other scheduled day activity, having integrated employment as a goal in a person's Individual Program Plan (IPP), and engaging in volunteer work.

Community Inclusion. In examining questions related to community inclusion many of the percentages were similar or equal when comparing M3 to M2. This includes going shopping and the average times went shopping, going out on errands and the average times went on errands, and the average times going out for entertainment, attending a religious or spiritual service and the average times went to religious or spiritual services, and the average times going on vacation in the past year. Percentages were higher for M3 for going out to eat, going on errands with housemates or co-workers, going out for entertainment, going out to exercise, and going out to exercise with staff, housemates or coworkers, going out for entertainment with staff, and attending religious services with housemates, coworkers or staff, and going on vacation with friends, family,

housemates or co-workers. The average number of times went out to exercise was less for M3 and fewer people reported going on vacation.

Friends and Family. In examining questions related to friends and family many of the percentages were similar when comparing M3 to M2. This includes having friends, going on a date if wanted to, having family to see, and talking with neighbors. Percentages were lower for M3 for having a best friend, being able to see friends or family when the person wants to, feeling lonely, and getting to help other people if person wants to.

Satisfaction. In examining questions related to satisfaction, there were some differences when comparing M3 to M2. Percentages were higher for M3 for liking day activity or program and wanting to live somewhere else, and slightly higher for wanting to do something else during the day. However, the percentages were lower for M3 for liking their job, liking their home and wanting to work somewhere else. The percentages were similar and high (82% or greater) for liking their neighborhood.

Service Coordination. In examining questions related to service coordination, many of the percentages were high (60% or greater) and similar when comparing M3 to M2. Percentages were similar for having met with a case manager/service coordinator, having an Individual Program Plan (IPP), helping to make their IPP, having their service coordinator ask what the person wants, and helping to get what the person needs, when asked. There was a noticeably lower percentage for M3 for their service coordinator calls back right away. Questions added for FY 12/13 and only asked of M3 were generally high (75% or greater) for having staff to help with daily activities, having staff come when scheduled, and having help to fix problems with staff.

Other Services and Supports. In looking at services and supports received, M3 had higher percentages compared to M2 for receiving “other” services and supports and receiving transportation. Percentages were higher for M3 for needing some support to manage self-injurious behavior and needing extensive support to manage disruptive behavior.

Health. In examining questions related to health, there was a notable trend in that the percentages were higher for M3 when compared to M2. Percentages for M3 were higher for reporting excellent or very good health, having visited the dentist in the past year, having a vision screening in the past year, having a hearing test in the past five years, receiving a pneumonia vaccine, receiving a Pap test (if female) in the past three years, receiving a mammogram (if female and 40 years or older) in the past two years, receiving a PSA test (if male and 50 years or older) in the past year, receiving colorectal cancer screening (if 50 years or older) in the past year, receiving medical care less than once a month, and for having seizures that are controlled. Percentages for M3 and M2 were both high and similar (94% or greater) for receiving an annual physical exam in the past year, and receiving the flu vaccine in the past year (85% or greater). Almost everyone in both groups (99%) reported having a primary care doctor.

Medications. In examining the one question asked in this section, the percentages were similar, with a little over half of M3 and M2 taking medications for mood disorders, anxiety, behavioral problems, or psychotic disorders.

Wellness. In examining questions related to maintaining a healthy lifestyle, percentages were noticeably higher when comparing M3 to M2 for routine engagement in moderate physical activity and physical activity that lasts 30 minutes or more. The proportion of individuals identified as overweight or obese was lower for M3. For both M3 and M2 the percentages for using tobacco were similar and low (10% or less).

Respect and Rights. In examining questions related to privacy, rights, and respect, the percentages were generally similar when comparing M3 to M2. Percentages were high and similar (80% or greater) for people announcing before entering the person's home and bedroom, having enough privacy at home, people asking before reading the person's mail or email, being alone with friends and visitors at the person's home, and being allowed to use the phone and internet when the person wants. The percentage was low and similar (13% or less) when comparing M3 to M2 for participating in a self-advocacy group meeting, conference or event. A question added for FY 12/13 and only asked of M3, was endorsed by 99% of people saying they "always or sometimes" were treated with respect by staff.

Safety. In examining questions related to people feeling afraid, percentages were generally low and similar (16% or less) when comparing M3 to M2 for “always or often” feeling scared at home, “always or often” feeling scared when the person is out in the neighborhood, “always or often” feeling scared at work or day program/other activity. The percentages for having someone to talk to if feeling afraid were high (82% or greater) and similar for both groups.

Access. In examining questions related to the accessibility of supports and services, the percentages were generally similar and high (85% or greater) when comparing M3 to M2 for having a way to get to places when needed, getting needed services, and feeling like staff have the right training to meet the person’s needs. There were several noticeable differences with respect to M3 to M2 when looking at the type of transportation utilized. Rides received from staff in provider vehicles, rides from friends and family, use of public transportation, and the use of specialized transportation/paratransit services were lower for M3. The percentage of rides being provided by staff in staff’s car was higher for M3. There were also some noticeable differences when looking at additional services requested, with the request for dental care, transportation, and health care being lower for M3.

Demographics by Mover Group

Presentation of Data

All results are presented in bar graphs illustrating results for individuals who have moved from a developmental center to the community and were surveyed during the third Adult Consumer Survey FY 12/13 (M3). Data gathered during the second Adult Consumer Survey FY 11/12 (M2) are provided on the bar graph for reference purposes. As explained in the methodology section under the subheading of “Results for M3” it is not appropriate to conduct statistical comparisons between M2 and M3.

III. Analysis by Mover Group

Table III-1: Age

	Average	TOTAL N
M2	50.6	816
M3	51.1	550

III. Analysis by Mover Group

Table III-2: Gender

	Male	Female	TOTAL N
M2	65%	35%	816
M3	65%	35%	550

Choices and Decision-Making by Mover Group

People make choices about their lives and are actively engaged in planning their services and supports.

Presentation of Data

All results are presented in bar graphs illustrating results for individuals who have moved from a developmental center to the community and were surveyed during the third Mover Survey FY 12/13 (M3). Data gathered during the second Mover Survey FY 11/12 (M2) are provided on the bar graph for reference purposes. As explained in the methodology section under the subheading of “Results for M3” it is not appropriate to conduct statistical comparisons between M2 and M3.

Employment and Other Daily Activities by Mover Group

People have support to find and maintain community employment.

Presentation of Data

All results are presented in bar graphs illustrating results for individuals who have moved from a developmental center to the community and were surveyed during the third Mover Survey FY 12/13 (M3). Data gathered during the second Mover Survey FY 11/12 (M2) are provided on the bar graph for reference purposes. As explained in the methodology section under the subheading of “Results for M3” it is not appropriate to conduct statistical comparisons between M2 and M3.¹

¹ In California, the working age for individuals with intellectual/developmental disabilities begins at age 22 and retires at age 55. Because this survey was created at the national level, results include individuals 18 years and older.

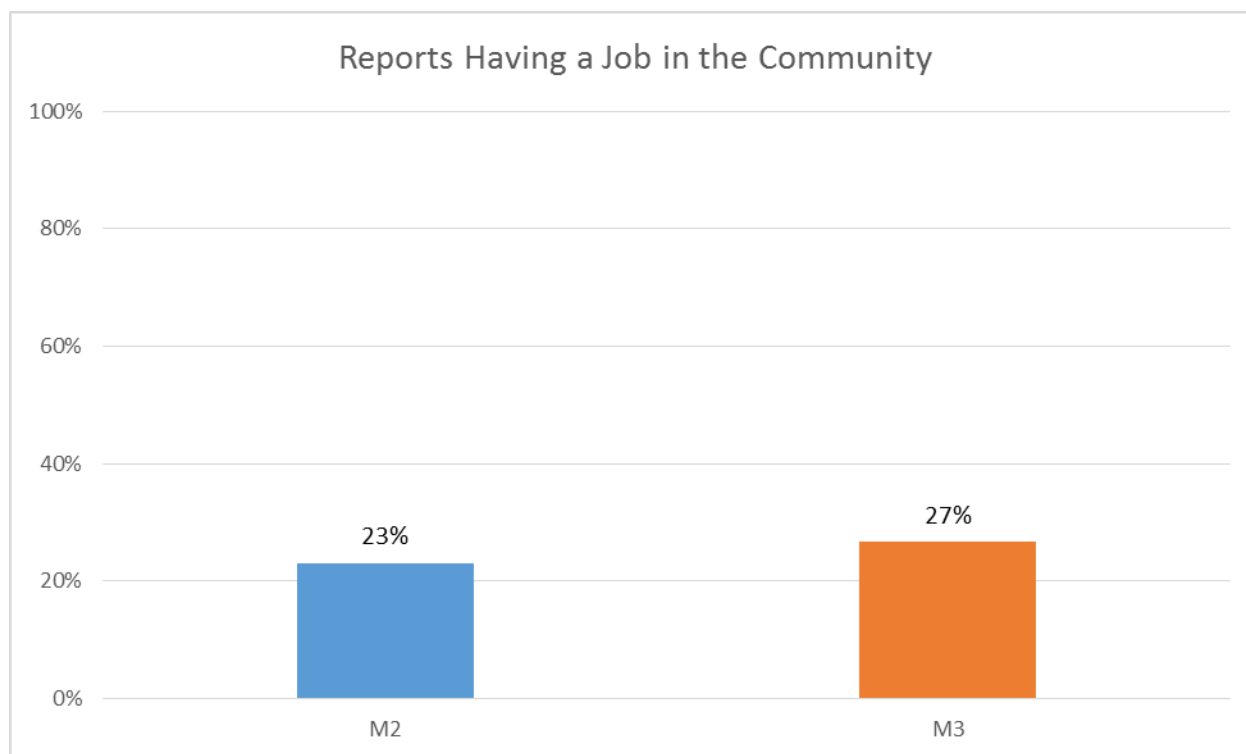

Table III-27: Do you have a job in the community?¹

	Yes	TOTAL N
M2	23%	221
M3	27%	135

¹ This question appears in Section I of the ACS and therefore only the individual receiving services is eligible to answer.

III. Analysis by Mover Group

Table III-28: Was this person engaged in this activity [paid job] during the two-week period?^{1, 2, 3}

	Community-Based Setting	TOTAL N	Facility-Based Setting	TOTAL N
M2	5%	676	10%	801
M3	7%	543	5%	533

¹ This information is collected in the Background Information section of the ACS and therefore may be obtained through review of state records, proxy respondent or from the individual reviewing services.

² The term “job” is used to describe activities that are paid work. The term “job” is not used when discussing unpaid activities.

³ Categories are not mutually exclusive, and therefore some results may add up to more than 100%.

III. Analysis by Mover Group

Table III-29: Number of hours worked or spent at this activity [paid job] during the two-week period¹

	Community-Based Setting	TOTAL N	Facility-Based Setting	TOTAL N
M2	27.4	34	34.1	74
M3	43.1	36	34.5	25

¹ Although respondents are asked to report the number of hours of paid work performed some individuals may be reporting the total number of hours spent at a day program or activity, resulting in the hours of paid work to be over reported.

III. Analysis by Mover Group

Table III-30: Total gross wages (before taxes or deductions) earned at this activity [paid job] during the two-week period.¹

	Community-Based Setting	TOTAL N	Facility-Based Setting	TOTAL N
M2	\$113.87	31	\$57.42	73
M3	\$67.30	37	\$37.03	25

¹ There are multiple factors which may affect the average gross wages reported for M2 and M3. One contributing factor may be that some work is paid by project or per item completed resulting in hourly wages less than minimum wage.

III. Analysis by Mover Group

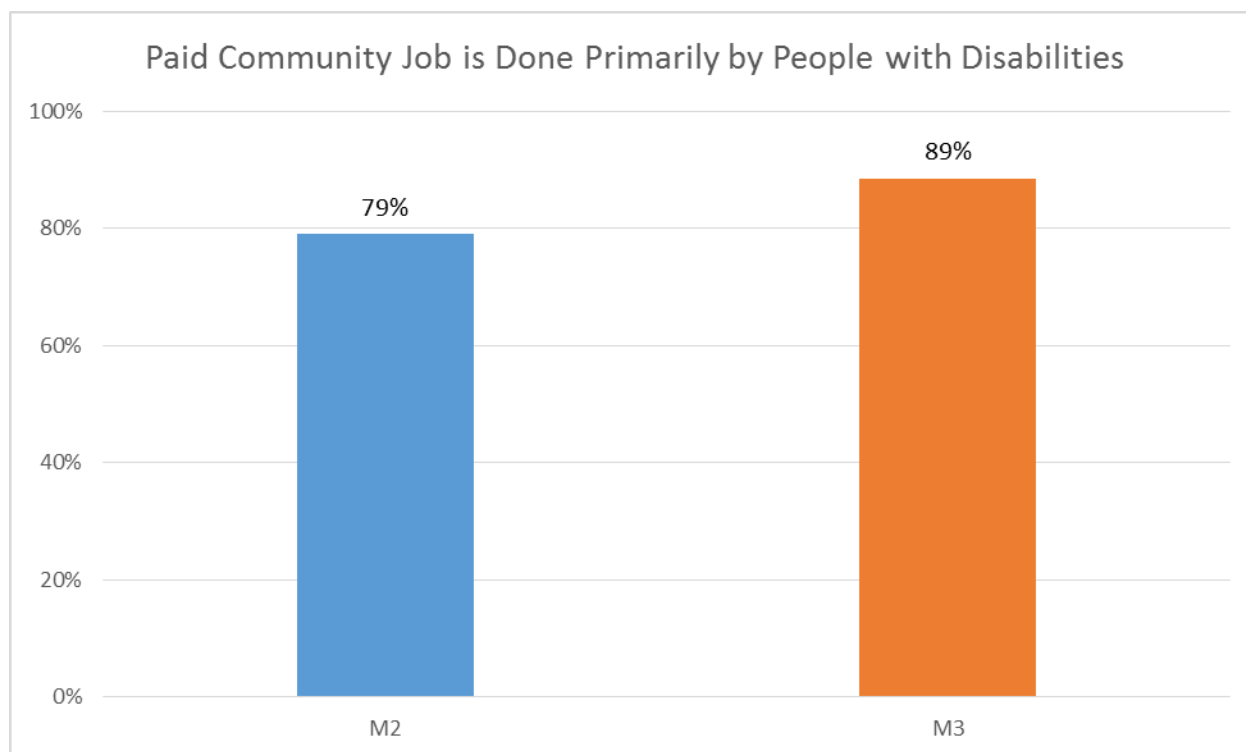

Table III-31: Is the [paid community] job done primarily by a group of people with disabilities?¹

	Yes	TOTAL N
M2	79%	38
M3	89%	35

¹ "Paid Job" may include work that is compensated at less than minimum wage.

Table III-32: Did this person work 10 out of the last 12 months in a community job?

	Yes	TOTAL N
M2	69%	30
M3	74%	38

III. Analysis by Mover Group

Table III-33: Does this person receive paid vacation and/or sick time at his/her job?

	Yes	TOTAL N
M2	7%	30
M3	6%	36

Table III-34: How long has this person been working at his/her current job?

	Average Months	TOTAL N
M2	26.4	22
M3	36.0	35

III. Analysis by Mover Group

III. Analysis by Mover Group

Table III-35: What type of job does this person have?¹

	Assembly, Manufacturing, Packaging	Building Grounds, Cleaning Maintenance	Construc- tion	Farming, Fishing, Forestry	Food Prep/ Service	General Office	Materials Handling, Mail Distribution	Retail Job	Other	TOTAL N
M2	0%	49%	0%	3%	8%	5%	3%	11%	22%	37
M3	3%	50%	3%	0%	3%	0%	0%	0%	39%	36

¹ The answer choices "Management, Business, or Financial Operations", "Personal Care Provider", "Professional or Technical Occupation", and "Self-Employed" were not selected by any survey respondent during the M2 and M3 data collection cycles.

III. Analysis by Mover Group

Table III-36: Was this person engaged in this [unpaid] activity during the two-week period?^{1, 2}

	Community-Based Setting	TOTAL N	Facility-Based Setting	TOTAL N
M2	12%	807	51%	806
M3	13%	538	56%	531

¹ Categories are not mutually exclusive, and therefore some results may add up to more than 100%.

² The term “Unpaid Activity” is used in the ACS and may include participation in a day program, other day activity or volunteer work.

III. Analysis by Mover Group

Table III-197: Number of hours worked or spent at [unpaid activity] during the two-week period.

	Community-Based Setting	TOTAL N	Facility-Based Setting	TOTAL N
M2	42.2	96	50.5	395
M3	53.3	70	44.4	295

III. Analysis by Mover Group

Table III-20: Does this person get regional center services or supports to participate in this [job or] activity?¹

	Yes, Paid	TOTAL N	Yes, Unpaid	TOTAL N
M2	42%	36	75%	97
M3	41%	34	42%	62

¹ Categories are not mutually exclusive and therefore some results may add up to more than 100%.

Table III-39: Is the [unpaid community activity] done primarily by a group of people with disabilities?

	Yes	TOTAL N
M2	87%	97
M3	96%	68

Table III-40: Is community employment a goal in this person's individual program plan (IPP)?

	Yes	TOTAL N
M2	12%	735
M3	12%	517

Table III-211: Would you like to have a job in the community?

	Yes	TOTAL N
M2	42%	159
M3	59%	87

III. Analysis by Mover Group

Table III-222: Do you go to a day program or do some other regularly scheduled activity during the day?¹

	Yes	TOTAL N
M2	75%	228
M3	72%	132

¹ The phrase “other regularly scheduled activity” may refer to any unpaid activity that is regularly scheduled, such as volunteer work.

III. Analysis by Mover Group

Table III-233: Do you do any volunteer work?

	Yes	TOTAL N
M2	22%	206
M3	25%	123

Community Inclusion by Mover Group

People have support to participate in everyday community activities.

Presentation of Data

The section on Community Inclusion includes indicators related to participation in the community.¹

All results are presented in bar graphs illustrating results for individuals who have moved from a developmental center to the community and were surveyed during the third Mover Survey FY 12/13 (M3). Data gathered during the second Mover Survey FY 11/12 (M2) are provided on the bar graph for reference purposes. As explained in the methodology section under the subheading of “Results for M3” it is not appropriate to conduct statistical comparisons between M2 and M3.

¹ Community Inclusion indicators are found in Section II of the Adult Consumer Survey.

Table III-244: In the past month, did you go shopping?

	Yes	TOTAL N
M2	90%	810
M3	91%	543

Table III-255: If yes, how many times did you go shopping in the past month?¹

	Average Times	TOTAL N
M2	3.7	619
M3	3.8	491

¹ The filtering applied to this question has been revised for this report. Only individuals who respond “yes” to the question “In the past month, did you go [community activity]?” are included as eligible respondents to this follow-up question. Previously, individuals who answered “No” to having participated in the community activity were included, causing the average times individuals participate in the activity to lower. As a result of the change the percentage for M2 has been revised from what was originally published in the M2 supplemental report.

III. Analysis by Mover Group

Table III-46: If you went shopping in the past month, who did you usually go with?¹

	Alone	Friends or Family	Housemates or Co-Workers	Staff	Others Not Listed	TOTAL N
M2	2%	8%	65%	94%	1%	727
M3	2%	6%	65%	97%	3%	492

¹ Categories are not mutually exclusive, and therefore some results may add up to more than 100%.

Table III-267: In the past month, did you go out on errands or appointments?

	Yes	TOTAL N
M2	73%	808
M3	70%	524

III. Analysis by Mover Group

Table III-48: If yes, how many times did you go on errands or appointments in the past month?¹

	Average Times	TOTAL N
M2	2.4	479
M3	2.7	101

¹ The filtering applied to this question has been revised for this report. Only individuals who respond “yes” to the question “In the past month, did you go [community activity]?” are included as eligible respondents to this follow-up question. Previously, individuals who answered “No” to having participated in the community activity were included, causing the average times individuals participate in the activity to lower. As a result of the change the percentage for M2 has been revised from what was originally published in the M2 supplemental report.

III. Analysis by Mover Group

Table III-49: If you went on errands the past month, who did you usually go with?¹

	Alone	Friends or Family	Housemates or Co-Workers	Staff	Others Not Listed	TOTAL N
M2	2%	5%	46%	96%	0.2%	579
M3	2%	7%	58%	95%	4%	366

¹ Categories are not mutually exclusive, and therefore some results may add up to more than 100%.

Table III-50: In the past month, did you go out for entertainment?

	Yes	TOTAL N
M2	75%	811
M3	82%	521

Table III-51: If yes, how many times did you go out for entertainment in the past month?¹

	Average Times	TOTAL N
M2	3.3	502
M3	3.2	428

¹ The filtering applied to this question has been revised for this report. Only individuals who respond “yes” to the question “In the past month, did you go [community activity]?” are included as eligible respondents to this follow-up question. Previously, individuals who answered “No” to having participated in the community activity were included, causing the average times individuals participate in the activity to be lower. As a result of the change the percentage for M2 has been revised from what was originally published in the M2 supplemental report.

III. Analysis by Mover Group

Table III-272: If you went out for entertainment the past month, who did you usually go with?¹

TOTAL N¹	71	39

¹ The "Total N" represents the number of individuals who selected at least one answer choice. The categories are not mutually exclusive and some respondents selected more than one answer choice. Therefore, the sum of all answer options is greater than the "Total N."

III. Analysis by Mover Group

Table III-942: Do you feel your support staff have the right training to meet your needs?¹

	Yes	TOTAL N
M2	97%	765
M3	96%	497

¹ This question was asked in Section II of the ACS and may have been answered by the individual or by proxy. For this question, staff proxy responses were excluded from analysis and reporting.

IV. Analyses by Lanterman Mover Group

This chapter summarizes demographics and all outcomes for individuals identified as Lanterman movers—individuals who have moved to the community from Lanterman Developmental Center on or after July 1, 2009. There are three comparison groups:

- *Lanterman mover group data collected in FY 11/12 (L2)*
- *Lanterman mover group data collected in FY 12/13 (L3)*
- *Other mover group data collected in FY 12/13 (OM3) – The mover group is a sample of individuals identified as movers (excluding Lanterman Movers), who have moved from a developmental center to the community within the last five years (All other movers or OM3)*

There are significant differences between the L3 and the OM3 groups (i.e. level of ID and primary means of expression that may impact findings) and as such, these comparisons should be interpreted broadly.

Results reflect responses from 131 people identified as L2, 178 people identified as L3 and 372 identified as OM3.

Important Data Notes:

Some questions were only asked depending upon previous answers (for example, only people who have a job in the community were asked if they chose their jobs.) The text indicates when results apply to a more limited respondent group.

Some questions can only be asked directly of individuals receiving services, while others can be answered by a ‘proxy’ respondent (for example, a family member, friend, staff person, or someone else who knows the person well), or through state records.

Indicators that allow other sources of data are noted.

Some response categories are collapsed (for example, results are combined for people who made a choice or had some input in making the choice). The table heading describes which response options are presented.

Appendices at the end of this report indicate survey section for each question.

Summary of Observations by Lanterman Mover Group

All results are presented in a bar graph followed by a table with corresponding sample sizes for each question presented. The bar graphs compare results for individuals identified as Lanterman movers, individuals who have moved to the community from the Lanterman Developmental Center on or after July 1, 2009 (L3); Lanterman movers whose data was collected in FY 11/12 (L2); and movers who have moved from a developmental center within the last five years, excluding the Lanterman movers (OM3). It is important to note that there are some differences in the level of ID and primary means of expression between L3 and OM3, such that there is a higher level of profound ID among L3 and higher use of gestures/body language used as the primary means of expression for L3 compared to OM3. Additionally, for some of the questions analyzed the sample sizes were small. Therefore, comparisons should be interpreted broadly.

The following summary sections provide information about statistically significant differences in survey findings between L3 and OM3. Results for all survey questions, regardless of significance, are presented in the Appendices found at the end of this report.

Selected Key Findings

Demographics. In examining demographic differences between L3 and OM3, percentages were higher for L3 for the following characteristics: having a legal/court appointed conservator, having epilepsy as a qualifying condition, profound level of intellectual disability (ID), having limited or no vision (legally blind), using gestures/body language as primary means of expression, being described as non-ambulatory, living in a community care facility (CCF), residing in current home for less time (less than one year and 1-3 years), and having more people on average living in the person's home. L3 had lower percentages for having a diagnosis of anxiety, behavior challenge, or psychotic disorder. For both L3 and OM3, almost all of the respondents were single, never married, chose English as their primary language, and received 24-hour on-site

support or supervision at their home. Both groups had similar percentages for the following characteristics: gender, average age, and the average number of people with disabilities living in the home.

Choices and Decision-Making. In examining questions related to having some input or making choices, there were no significant differences between L3 and OM3.

Employment and Other Daily Activities. In examining questions related to employment and other daily activities, there was a significant difference in engaging in an unpaid activity in a community-based setting and hours participated in unpaid activity in a facility between L3 and OM3, with L3 having a higher percentages compared to OM3. There was a significant difference between L3 and OM3 for having a job in a facility-based setting, having integrated employment as a goal in a person's Individual Program Plan (IPP), with L3 having a lower percentage compared to OM3.

Community Inclusion. In examining questions related to community inclusion there were significant differences between L3 and OM3 for going out on errands or appointments in the past month, going out to eat in the past month, and going on vacation in the past year, with L3 having lower percentages compared to OM3. There also were significant differences in who accompanied the person in various community activities, with L3 having higher percentages for staff, housemates or coworkers and lower percentages for friends or family as companions when going out for entertainment, going out to eat, attending religious or spiritual services, going on vacations, and going out to exercise.

Friends and Family. Due to sample sizes being less than 30 for L3, questions related to having relationships with friends and family are not reported and tests of statistical significance were not conducted.

Satisfaction. Due to sample sizes being less than 30 for L3, questions related to having satisfaction with services and supports are not reported and tests of statistical significance were not conducted.

Other Services and Supports. In examining questions related to service coordination, there was a significant difference in the pattern of responses for the type of services and

supports received, with L3 being less likely to use clinical services. There was a significant difference between L3 and OM3 in receiving Medicare, with L3 having a higher percentage compared to OM3, though the percentages for both groups were above 75%. There was a significant difference between L3 and OM3 for needing supports, with L3 reporting higher levels of need for managing disruptive behavior and managing self-injurious behavior.

Health. In examining questions related to health, there were significant differences between L3 and OM3, with L3 having higher percentages for having visited a dentist in the past year, having a vision screening in the past year, having a hearing test in the past five years, if female receiving a Pap test in the past three years and if over 50 receiving a colorectal cancer screening. There was a significant difference between L3 and OM3 for the frequency of medical care and seizures, with L3 receiving medical care more frequently and having seizures with less frequency.

Medications. In examining the one question asked in this section, there was no significant difference between L3 and OM3 for taking medications for mood disorders, anxiety, behavioral problems, or psychotic disorders.

Wellness. In examining questions related to maintaining a healthy lifestyle, there were significant differences between L3 and OM3, with L3 having a lower proportion of people identified as overweight or obese, engaging in less moderate physical activity and doing these activities with less frequency during the week, and using less tobacco.

Respect and Rights. In examining questions related to privacy, rights, and respect, there were significant differences between L3 and OM3, L3 having a higher percentage than OM3 for being able to be alone with visitors at home, and being allowed to use the phone and Internet when they want to. There was a significant difference between L3 and OM3 for people asking before reading mail or email, and participating or having the opportunity to participate in a self-advocacy group meeting, conference, or event, with L3 having a lower percentage compared to OM3.

Safety. Due to sample sizes being less than 30 for L3, questions related to safety are not reported and tests of statistical significance were not conducted.

Access. Due to sample sizes being less than 30 for L3, most questions related to having access to supports and services are not reported and tests of statistical significance were not conducted. There was significant difference between L3 and OM3 for getting needed services, with L3 having a higher percentage. However, for both groups the percentage was more than 90%.

Demographics by Lanterman Mover Group

Presentation of Data

All results are presented in bar graphs comparing results for individuals who have moved from the Lanterman Developmental Center to the community on or after July 1, 2009 and were surveyed during the third Lanterman Mover Survey FY 12/13 (L3) compared to All Other Movers (OM3).

Lanterman Mover data from the second Lanterman Mover Survey FY 11/12 (L2) are provided for reference purposes. As explained in the methodology section under the subheading of “Results for L3” it is not appropriate to conduct statistical comparisons between L2 and L3. There is a high probability that individuals surveyed in L2 were also surveyed in L3 as all individuals who have moved from Lanterman Developmental Center since July 1, 2009 are surveyed every year.

IV. Analysis by Lanterman Mover Group

Table IV-1: Age

	Average	TOTAL N
L2	53.1	131
L3	53.7	178
OM3	49.8	372

IV. Analysis by Lanterman Mover Group

Table IV-2: Gender¹

	Male	Female	TOTAL N
L2	63%	37%	131
L3	60%	40%	178
OM3	67%	33%	372

¹ Results for Gender were not statistically significant between L3 and OM3. Significance testing was not analyzed between L2 and L3 due to the sampling strategy methods used.

IV. Analysis by Lanterman Mover Group

IV. Analysis by Lanterman Mover Group

Table IV-3: What is this person's race and ethnicity?^{1, 2}

	American Indian/ Alaska Native	Asian	Black/ African American	Pacific Islander	White	Other Race Not Listed	Don't Know	Race N	Hispanic/ Latino	Ethnicity N
L2	0%	1%	7%	0%	73%	18%	0%	131	18%	131
L3	0%	4%	6%	0%	75%	6%	6%	166	18%	178
OM3	1%	1%	11%	1%	77%	8%	2%	361	13%	372

¹ Categories are not mutually exclusive, and therefore some results may add up to more than 100%.

² Results for American Indian/Alaska Native, Black/African American, Pacific Islander, White, Other Race Not Listed and Hispanic/Latino are not statistically significant between L3 and OM3. Significance testing was not analyzed between L2 and L3 due to the sampling strategy methods used.

Table IV-4: Does this person have a legal/court-appointed conservator?

	Limited Conservatorship	TOTAL N
L2	75%	113
L3	81%	160
OM3	40%	326

IV. Analysis by Lanterman Mover Group

Table IV-5: Marital Status¹

	Single, Never Married	Married	Single, Married in Past	TOTAL N
L2	100%	0%	0%	126
L3	100%	0%	0%	173
OM3	98%	0%	2%	371

¹ Results are not statistically significant between L3 and OM3. Significance testing was not analyzed between L2 and L3 due to the sampling strategy methods used.

IV. Analysis by Lanterman Mover Group

Table IV-6: What [qualifying] conditions are noted in this person's record?^{1, 2, 3}

	ID	ID N	ASD	CP	Epilepsy	Other Conditions N
L2	97%	124	19%	26%	59%	119
L3	99%	178	23%	35%	54%	163
OM3	98%	371	16%	30%	42%	304

¹ The information presented on ASD, CP and Epilepsy is a subset of data captured along with other conditions a person may have. Information about the individual's level of ID is asked in a separate question on the ACS but is included along with the other qualifying conditions to illustrate the overall distribution on the four qualifying conditions.

² Results for ID, ASD, and CP are not statistically significant between L3 and OM3. Significance testing was not analyzed between L2 and L3 due to the sampling strategy methods used.

³ Categories are not mutually exclusive, and therefore some results may add up to more than 100%.

IV. Analysis by Lanterman Mover Group

Table IV-7: Level of Intellectual Disability (ID)¹

	Mild ID	Moderate ID	Severe ID	Profound ID	TOTAL N
L2	20%	13%	15%	48%	131
L3	3%	7%	13%	75%	176
OM3	25%	10%	12%	51%	368

¹ Results for Severe ID are not statistically significant between L3 and OM3. Significance testing was not analyzed between L2 and L3 due to the sampling strategy methods used.

IV. Analysis by Lanterman Mover Group

Table IV-8: What [mental health] conditions are noted in this person's record?^{1, 2, 3, 4}

	Mood Disorder	Anxiety Disorder	Behavior Challenges	Psychotic Disorder	Other Mental Illness	TOTAL N
L3	8%	4%	8%	2%	1%	163
OM3	11%	10%	14%	10%	4%	304

¹ The information presented on mental illness is a subset of data captured along with other disabilities or conditions.

² Results for Mood Disorder and Behavior Challenges are not statistically significant between L3 and OM3. Significance testing was not analyzed between L2 and L3 due to the sampling strategy methods used.

³ Additional answer choices describing mental health conditions were added to this question on the version of the ACS used in M3/L3. As a result of the change in answer options it is not possible to compare response data from previous collection cycles.

⁴ Categories are not mutually exclusive, and therefore some results may add up to more than 100%.

IV. Analysis by Lanterman Mover Group

IV. Analysis by Lanterman Mover Group

Table IV-9: What other disabilities or conditions are noted in this person's record?^{1, 2, 3}

	Alzheimer's Disease or Other Dementia	Brain Injury	Chemical Dependency	Down Syndrome	Hearing Loss- Severe or Profound	Limited or No Vision- Legally Blind	Prader - Willi Syndrome	Other Disabilities Not Listed	No Other Disabilities Other than ID	Don't Know	TOTAL N

OM3	1%	2%	0.3%	2%	7%	16%	1%	11%	6%	9%	304

¹ The information presented is a subset of data captured along with other disabilities or conditions.

² Results for Brain Injury, Chemically Dependency, Hearing Loss- Severe or Profound, Alzheimer's disease or Other Dementia, Down syndrome, Prader- Willi Syndrome, Other Disabilities Not Listed, No Other Disabilities Other than ID, and, Don't Know are not statistically significant between L3 and OM3. Significance testing was not analyzed between L2 and L3 due to the sampling strategy methods used.

³ Categories are not mutually exclusive, and therefore some results may add up to more than 100%.

IV. Analysis by Lanterman Mover Group

Table IV-10: What is this person's preferred language?¹

	English	Other	TOTAL N
L2	94%	6%	131
L3	94%	6%	178
OM3	96%	4%	372

¹ Results are not statistically significant between L3 and OM3. Significance testing was not analyzed between L2 and L3 due to the sampling strategy methods used.

IV. Analysis by Lanterman Mover Group

Table IV-11: What is this person's primary means of expression?¹

	Spoken	Gestures/ Body Language	Sign Language/ Finger Spelling	Communication Aid/Device	Other	Don't Know	TOTAL N
L2	16%	83%	1%	0%	0%	1%	131
L3	17%	81%	0%	0%	1%	0%	178
OM3	35%	63%	1%	0.3%	1%	0.3%	371

¹ Results for Sign Language/Finger Spelling, Communication Aid/Device, Other, and Don't Know are not statistically significant between L3 and OM3. Significance testing was not analyzed between L2 and L3 due to the sampling strategy methods used.

IV. Analysis by Lanterman Mover Group

Table IV-12: How would you describe this person's mobility?¹

	Moves without Aids	Moves with Aids or Wheelchair Independently	Non-Ambulatory	TOTAL N
L2	60%	18%	23%	128
L3	48%	14%	38%	176
OM3	60%	14%	26%	371

¹ Results for Moves with Aids or Wheelchair Independently are not statistically significant between L3 and OM3. Significance testing was not analyzed between L2 and L3 due to the sampling strategy methods used.

IV. Analysis by Lanterman Mover Group

Table IV-13: How would you characterize the place where this person lives?¹

	CCF	FHA	ICF	ILS/SLS	SNF	TOTAL N
L2	86%	0%	6%	5%	0%	125
L3	95%	1%	1%	1%	3%	171
OM3	80%	11%	3%	5%	1%	372

¹ Results for ICF DD-N/DD-H, and SNF are not statistically significant between L3 and OM3. Significance testing was not analyzed between L2 and L3 due to the sampling strategy methods used.

IV. Analysis by Lanterman Mover Group

Table IV-14: How long has this person lived in his/her current home?

	Less than 1 Year	1-3 Years	3-5 Years	Over 5 Years	TOTAL N
L2	21%	40%	23%	16%	130

OM3	98%	1%	1%	0%	1%	0%	369

Employment and Other Daily Activities by Lanterman Mover Group

People have support to find and maintain community employment.

Presentation of Data

All results are presented in bar graphs comparing results for individuals who have moved from the Lanterman Developmental Center to the community on or after July 1, 2009 and were surveyed during the third Lanterman Mover Survey FY 12/13 (L3) compared to All Other Movers (OM3).

Lanterman Mover data from the second Lanterman Mover Survey FY 11/12 (L2) are provided for reference purposes. As explained in the methodology section under the subheading of “Results for L3” it is not appropriate to conduct statistical comparisons between L2 and L3. There is a high probability that individuals surveyed in L2 were also surveyed in L3 as all individuals who have moved from Lanterman Developmental Center since July 1, 2009 are surveyed every year.¹

¹ In California, the working age for individuals with intellectual/developmental disabilities begins at age 22 and retires at age 55. Because this survey was created at the national level, results include individuals 18 years and older.

Table IV-188: Was this person engaged in this activity [paid job] during the two-week period?^{1, 2, 3}

	Facility-Based Setting	TOTAL N
L2	5%	129
L3	1%	172
OM3	6%	361

¹ This information is collected in the Background Information section of the ACS and therefore may be obtained through review of state records, proxy respondent or from the individual reviewing services.

² The term "job" is used to describe activities that are paid work and is not used when discussing unpaid activities.

³ Data were also collected on an individuals' employment in a community-based setting in the past two weeks. The difference between L3 and OM3 were not statistically significant and therefore does not appear in the main report. Results are available in Appendix B.

Table IV-1919: Was this person engaged in this [unpaid] activity during the two-week period?¹

	Community-Based Setting	TOTAL N
L2	10%	130
L3	21%	173
OM3	10%	365

¹ Data were also collected on an individuals' participation in an unpaid facility-based activity in the past two weeks. The difference between L3 and OM3 were not statistically significant and therefore does not appear in the main report. Results are available in Appendix B.

Table IV-200: Number of hours worked or spent at [unpaid activity] during the two-week period.¹

	Facility-Based Setting	TOTAL N
L2	53.7	79
L3	80.0	104
OM3	40.7	191

¹ Data were also collected on the number of hours an individual participated in a community-based activity. The difference between L3 and OM3 were not statistically significant and therefore does not appear in the main report. Results are available in Appendix B.

Table IV-211: Is community employment a goal in this person's Individual Program Plan [IPP]?

	Yes	TOTAL N
L2	17%	121
L3	4%	165
OM3	16%	352

Community Inclusion by Lanterman Mover Group

People have support to participate in everyday community activities.

Presentation of Data

All results are presented in bar graphs comparing results for individuals who have moved from the Lanterman Developmental Center to the community on or after July 1, 2009 and were surveyed during the third Lanterman Mover Survey FY 12/13 (L3) compared to All Other Movers (OM3).

Lanterman Mover data from the second Lanterman Mover Survey FY 11/12 (L2) are provided for reference purposes. As explained in the methodology section under the subheading of “Results for L3” it is not appropriate to conduct statistical comparisons between L2 and L3. There is a high probability that individuals surveyed in L2 were also surveyed in L3 as all individuals who have moved from Lanterman Developmental Center since July 1, 2009 are surveyed every year.¹

¹ Community Inclusion indicators are found in Section II of the Adult Consumer Survey.

IV. Analysis by Lanterman Mover Group

Table IV-222: If you went shopping in the past month, who did you usually go with?¹

	Alone	Friends or Family	Housemates or Co-Workers	Staff	Others Not Listed	TOTAL N
L2	0%	4%	68%	98%	2%	108
L3	0%	3%	72%	100%	0%	155
OM3	3%	7%	62%	96%	5%	337

¹ Results for "In the past month, did you go shopping?" were not statistically significant and therefore are not included in the report. A majority of respondents for all three subgroups answered "Yes"; L3: 88%, OM3: 92%, L2: 84%.

Table IV-233: In the past month, did you go out on errands or appointments?

	Yes	TOTAL N
L2	78%	129
L3	61%	177
OM3	76%	347

Table IV-244: If gone on errands the past month, who did you usually go with?^{1, 2}

	Alone	Friends or Family	Housemates or Co-Workers	Staff	Others Not Listed	TOTAL N
L2	0%	4%	48%	98%	1%	101
L3	0%	3%	59%	96%	1%	106
OM3	3%	8%	58%	95%	5%	260

¹ Results for Alone, Housemates or Co-Workers, Staff, and Other Not Listed were not statistically significant between L3 and OM3. Significance testing was not analyzed between L2 and L3 due to the sampling strategy methods used.

² Categories are not mutually exclusive, and therefore some results may add up to more than 100%.

Table IV-255: If gone out for entertainment the past month, who did you usually go with?^{1, 2, 3}

	Alone	Friends or Family	Housemates or Co-Workers	Staff	Others Not Listed	TOTAL N
L2	0%	7%	71%	98%	5%	99
L3	0%	2%	79%	99%	0%	140
OM3	1%	7%	66%	97%	6%	288

¹ Results for Alone and Staff were not statistically significant between L3 and OM3. Significance testing was not analyzed between L2 and L3 due to the sampling strategy methods used.

² Categories are not mutually exclusive, and therefore some results may add up to more than 100%.

³ Results for "In the past month, did you go out for entertainment?" were not statistically significant and therefore are not included in the report. A majority of respondents for all three subgroups answered "Yes"; L3: 79%, OM3: 84%, L2: 78%.

Table IV-266: In the past month, did you go out to a restaurant or coffee shop?

	Yes	TOTAL N
L2	70%	128
L3	75%	132
OM3	83%	290

IV. Analysis by Lanterman Mover Group

Table IV-277: If gone out to eat the past month, who did you usually go with?^{1, 2}

	Alone	Friends or Family	Housemates or Co-Workers	Staff	Others Not Listed	TOTAL N
L2	0%	12%	71%	92%	3%	89
L3	0%	4%	76%	97%	0%	132
OM3	3%	12%	72%	94%	6%	288

¹ Results for Alone, Housemates or Co-Workers, and Staff were not statistically significant between L3 and OM3. Significance testing was not analyzed between L2 and L3 due to the sampling strategy methods used.

² Categories are not mutually exclusive, and therefore some results may add up to more than 100%.

IV. Analysis by Lanterman Mover Group

Table IV-288: If you went to religious services the past month, who did you usually go with?^{1, 2, 3}

	Alone	Friends or Family	Housemates or Co-Workers	Staff	Others Not Listed	TOTAL N
L2	3%	9%	55%	91%	1%	33
L3	0%	2%	74%	93%	0%	54
OM3	3%	13%	52%	89%	1%	103

¹ Results for Alone, Staff, and Other Not Listed were not statistically significant between L3 and OM3. Significance testing was not analyzed between L2 and L3 due to the sampling strategy methods used.

² Categories are not mutually exclusive, and therefore some results may add up to more than 100%.

³ Results for "In the past month, did you go out to a religious service or spiritual practice?" were not statistically significant and therefore are not included in the report. Roughly one-third of respondents for all three subgroups answered "Yes"; L3: 31%, OM3: 30%, L2: 27%.

IV. Analysis by Lanterman Mover Group

Table IV-29: If went to exercise the past month, who did you usually go with?^{1, 2, 3}

	Alone	Friends or Family	Housemates or Co-Workers	Staff	Others Not Listed	TOTAL N
L2	0%	0%	71%	98%	7%	42
L3	0%	1%	77%	95%	1%	73
OM3	7%	3%	62%	92%	1%	149

¹ Results for Friends or Family, Staff, and Other Not Listed were not statistically significant between L3 and OM3. Significance testing was not analyzed between L2 and L3 due to the sampling strategy methods used.

² Categories are not mutually exclusive, and therefore some results may add up to more than 100%.

³ Results for "In the past month, did you go out for exercise?" were not statistically significant and therefore are not included in the report. Over one-third of respondents for all three subgroups answered "Yes"; L3: 41%, OM3: 43%, L2: 34%.

Table IV-30: In the past year, did you go away on a vacation?

	Yes	TOTAL N
L2	27%	125
L3	6%	177
OM3	17%	349

Other Services and Supports by Lanterman Mover Group

People receive the services and supports they need.

Presentation of Data

All results are presented in bar graphs comparing results for individuals who have moved from the Lanterman Developmental Center to the community on or after July 1, 2009 and were surveyed during the third Lanterman Mover Survey FY 12/13 (L3) compared to All Other Movers (OM3).

Lanterman Mover data from the second Lanterman Mover Survey FY 11/12 (L2) are provided for reference purposes. As explained in the methodology section under the subheading of “Results for L3” it is not appropriate to conduct statistical comparisons between L2 and L3. There is a high probability that individuals surveyed in L2 were also surveyed in L3 as all individuals who have moved from Lanterman Developmental Center since July 1, 2009 are surveyed every year.

IV. Analysis by Lanterman Mover Group

Table IV-31: Does this person receive any of the following services/supports funded by the regional center?^{1, 2}

	Service Coordination	Assistive Technology	Clinical Services	Transportation	Respite/Family Support	Other	TOTAL N
L2	96%	14%	49%	76%	10%	8%	130
L3	99%	19%	37%	79%	2%	4%	178
OM3	99%	25%	52%	85%	1%	31%	369

Re

¹ Results for Assistive Technology, Transportation, and Respite/Family Support were not statistically significant between L3 and OM3. Significance testing was not analyzed between L2 and L3 due to the sampling strategy methods used.

² Categories are not mutually exclusive, and therefore some results may add up to more than 100%.

IV. Analysis by Lanterman Mover Group

Table IV-292: Does this person currently receive Medicare?¹

	Yes	TOTAL N
L3	84%	160
OM3	76%	340

¹ This question was added to the ACS during the FY 12/13 data collection cycle.

Table IV-33: Does person need support to manage self-injurious behavior?¹

	No Support Needed	Some Support Needed	Extensive Support Needed	TOTAL N
L2	40%	50%	10%	129
L3	39%	53%	8%	178
OM3	52%	42%	6%	372

¹ Results for Extensive Support Needed were not statistically significant between L3 and OM3. Significance testing was not analyzed between L2 and L3 due to the sampling strategy methods used.

Table IV-304: Does person need support to manage disruptive behavior?¹

	No Support Needed	Some Support Needed	Extensive Support Needed	TOTAL N
L2	26%	40%	40%	130
L3	22%	35%	43%	178
OM3	31%	35%	34%	372

¹ Results for Some Support Needed were not statistically significant between L3 and OM3. Significance testing was not analyzed between L2 and L3 due to the sampling strategy methods used.

Health by Lanterman Mover Group

People secure needed health services.

Presentation of Data

All results are presented in bar graphs comparing results for individuals who have moved from the Lanterman Developmental Center to the community on or after July 1, 2009 and were surveyed during the third Lanterman Mover Survey FY 12/13 (L3) compared to All Other Movers (OM3).

Lanterman Mover data from the second Lanterman Mover Survey FY 11/12 (L2) are provided for reference purposes. As explained in the methodology section under the subheading of “Results for L3” it is not appropriate to conduct statistical comparisons between L2 and L3. There is a high probability that individuals surveyed in L2 were also surveyed in L3 as all individuals who have moved from Lanterman Developmental Center since July 1, 2009 are surveyed every year.

IV. Analysis by Lanterman Mover Group

Table IV-315: Overall, how would you describe this person's health?¹

	Excellent/Very Good	Fairly Good	Poor	TOTAL N
L2	41%	56%	3%	129
L3	63%	34%	3%	178
OM3	63%	37%	0.3%	368

¹ Results for Results for Excellent/Very Good and Fairly Good were not statistically significant between L3 and OM3. Significance testing was not analyzed between L2 and L3 due to the sampling strategy methods used.

Table IV-326: When was his/her last dentist visit?

	Within the Past Year	TOTAL N
L2	86%	123
L3	94%	167
OM3	88%	359

IV. Analysis by Lanterman Mover Group

Table IV-37: When was the last time this person had an eye examination/vision screening?

	Within the Past Year	TOTAL N
L2	68%	114
L3	70%	158
OM3	59%	330

Table IV-38: When was the last time this person had a hearing test?

	Within the Past Five Years	TOTAL N
L2	70%	102
L3	86%	149
OM3	73%	297

	Within the Past Three Years	TOTAL N
L2	76%	39
L3	86%	64
OM3	73%	106

IV. Analysis by Lanterman Mover Group

Table IV-33: When was the last time this person had a screening for colorectal cancer (either sigmoidoscopy or colonoscopy)?

	Yes	TOTAL N
L2	22%	49
L3	33%	92
OM3	20%	161

IV. Analysis by Lanterman Mover Group

Table IV-41: How often does this person require medical care?¹

	Less than Once a Month	At Least Once a Month	At Least Once a Week	TOTAL N
L2	69%	25%	3%	130
L3	73%	24%	3%	175
OM3	86%	12%	1%	365

¹ Results for At Least Once a Week were not statistically significant between L3 and OM3. Significance testing was not analyzed between L2 and L3 due to the sampling strategy methods used.

IV. Analysis by Lanterman Mover Group

Table IV-42 If this person has seizures, how often do they occur? ¹

	Seizures are Controlled	Less than Once a Month	At Least Once a Month	At Least Once a Week	TOTAL N
L2	63%	16%	9%	9%	129
L3	58%	33%	6%	3%	177
OM3	65%	20%	10%	6%	367

¹ Results for Seizures are Controlled, At Least Once a Month, and At Least Once a Week were not statistically significant between L3 and OM3. Significance testing was not analyzed between L2 and L3 due to the sampling strategy methods used.

Wellness by Lanterman Mover Group

People are supported to maintain healthy habits.

Presentation of Data

All results are presented in bar graphs comparing results for individuals who have moved from the Lanterman Developmental Center to the community on or after July 1, 2009 and were surveyed during the third Lanterman Mover Survey FY 12/13 (L3) compared to All Other Movers (OM3).

Lanterman Mover data from the second Lanterman Mover Survey FY 11/12 (L2) are provided for reference purposes. As explained in the methodology section under the subheading of “Results for L3” it is not appropriate to conduct statistical comparisons between L2 and L3. There is a high probability that individuals surveyed in L2 were also surveyed in L3 as all individuals who have moved from Lanterman Developmental Center since July 1, 2009 are surveyed every year.

Table IV-343: Proportion of individuals overweight or obese.¹

	BMI Over 25	TOTAL N
L2	49%	130
L3	38%	168
OM3	54%	324

¹ Percentages reflect the proportion of people who were determined to be overweight or obese, meaning they have a Body Mass Index (BMI) of 25 or more. This measure was calculated based on height and weight information collected in the Background Information section of the survey.

Table IV-354: Does this person routinely engage in any moderate physical activity?

	Yes	TOTAL N
L2	25%	125
L3	47%	174
OM3	60%	367

Table IV-36: If yes to moderate exercise, does the moderate physical activity last 30 minutes or more?

	Yes	TOTAL N
L2	26%	125
L3	36%	173
OM3	52%	368

Table IV-37: Does this person smoke or chew tobacco?

	Yes	TOTAL N
L2	1%	126
L3	1%	173
OM3	14%	369

Respect and Rights by Lanterman Mover Group

People receive the same respect and protections as others in the community.

Presentation of Data

All results are presented in bar graphs comparing results for individuals who have moved from the Lanterman Developmental Center to the community on or after July 1, 2009 and were surveyed during the third Lanterman Mover Survey FY 12/13 (L3) compared to All Other Movers (OM3).

Lanterman Mover data from the second Lanterman Mover Survey FY 11/12 (L2) are provided for reference purposes. As explained in the methodology section under the subheading of “Results for L3” it is not appropriate to conduct statistical comparisons between L2 and L3. There is a high probability that individuals surveyed in L2 were also surveyed in L3 as all individuals who have moved from Lanterman Developmental Center since July 1, 2009 are surveyed every year.

Table IV-38: Do people read your mail or email without asking you first?¹

	No	TOTAL N
L2	78%	73
L3	80%	113
OM3	91%	249

¹ Due to the phrasing of this question a response of "No" indicates that the individual was asked before their mail or email was read.

Table IV-48: Can you be alone with friends or visitors at your home, or does someone have to be with you?

	Yes, Can Be Home Alone with Visitors	TOTAL N
L2	85%	81
L3	92%	143
OM3	81%	277

	Yes	TOTAL N
L2	94%	127
L3	97%	177
OM3	90%	356

V. Appendices

Terms/Notations Used in the Appendix

L2—Adult Consumer Survey of individuals who have moved from Lanterman Developmental Center to the community (Lanterman mover) Subgroup FY 11/12 – Cycle 2

L3—Adult Consumer Survey of individuals who have moved from Lanterman Developmental Center to the community (Lanterman mover) Subgroup FY 12/13 – Cycle 3

M2—Adult Consumer Survey of individuals who have moved from a developmental center to the community (mover) Subgroup FY 11/12 – Cycle 2

M3—Adult Consumer Survey of individuals who have moved from a developmental center to the community (mover) Subgroup FY 12/13 – Cycle 3

n<30—indicates that 30 or fewer responses were recorded for this item. Results should be used with caution as the percentages represent a small percentage of the overall sample of individuals who participated in the survey.

OM3—All individuals identified as movers excluding the Lanterman movers; individuals who have moved from any developmental center to the community within the last five years (All Other Movers) and data collected in FY 12/13 (OM3)

Significance (Sig.)—indicates whether there was a significant difference between L3 and OM3. The specific test of significant group difference varied based on the type of question and response choices in the survey.

Survey Section—provides information on the section of the Adult Consumer Survey (ACS) where the question is located. Where the questions are located in the survey indicates the permissible data sources or who the respondents are.

- **BI:** indicates this question as being located in the “Background Information” sections of the ACS. The Background Information Section is made up of

objective questions regarding an individual's health status and exam history as well as qualifying condition, residence type, employment/day activity or program, and funding source information. The section is completed by reviewing state records as well as collecting information directly from the individual receiving services, family, or staff who know the individual well.

- **Section I:** indicates this question is located in Section I of the ACS. Only the individual receiving services is permitted to answer the questions in Section I since it includes questions that require subjective judgments and personal experiences.
- **Section II:** indicates this question is located in Section II of the ACS. "Proxy" respondents or other respondents who know the individual who is receiving services well and could observe the individual engaging in these activities—such as a family member, friend or support worker—are allowed to complete Section II of the Survey. This section consists of questions regarding the individual's involvement in the community, choices, and access to services.
- **New Question:** indicates this question was added to the ACS during the FY 12/13 data collection cycle. Therefore, comparisons to FY 11/12 data could not be made.
