Quality Assessment Project and National Core Indicators™

This report contains regional center level results from California's statewide National Core Indicators™ (NCI™) Adult In-Person Survey¹ (IPS) data collection from fiscal year 2017-18 (FY 17/18) in accordance with Welfare and Institutions Code (WIC), Section 4571. WIC, Section 4571 directs the Department of Developmental Services (DDS) to collect accurate, reliable, and valid consumer and family satisfaction measures as well as individual outcome data. In California, data from this project will be used to review and benchmark statewide and regional center developmental disability service system performance.² This report shows this regional center compared to the California statewide and NCI averages. Regional centers can use this report to help guide strategic planning and monitor systemic changes.

What is NCI?

The NCI program is a voluntary effort by state developmental disability agencies to track their performance using a standardized set of consumer and family/guardian surveys with nationally validated measures. The effort is coordinated by the National Association of State Directors of Developmental Disabilities Services (NASDDDS) and the Human Services Research Institute (HSRI).

NCI has developed more than 100 standard performance measures (or 'indicators') that states use to assess the outcomes of services for individuals and families, including outcomes in the areas of employment, rights, service planning, community inclusion, choice, health, and safety. In 2017-18 a total of 46 states, the District of Columbia and 22 sub-state entities participated in NCI. Not all states participate in the Adult In-Person Survey every year. Thirty-five (35) states and the District of Columbia administered the In-Person Survey in 2017-18 and submitted valid samples for analysis.³ Together, they collected survey responses and information from a total of 25,671 individuals.

¹ Formerly the Adult Consumer Survey

² Refer to the California Statewide Adult In-Person Survey Report FY 17/18 for information about Quality Assessment Project implementation, NCI and California's statewide results.

³ States that participated in the Adult In-Person Survey were: Alabama (AL), Arizona (AZ), Arkansas (AR), California (CA), Colorado (CO), Connecticut (CT), Delaware (DE), District of Columbia (DC), Florida (FL), Georgia (GA), Illinois (IL), Indiana (IN), Kansas (KS), Kentucky (KY), Louisiana (LA), Maine (ME), Massachusetts (MA), Michigan (MI), Minnesota (MN), Missouri (MO), North Carolina (NC), Nebraska (NE), Nevada (NV), New York (NY), Ohio (OH), Oklahoma (OK), Oregon (OR), Pennsylvania (PA), Rhode Island (RI), South Carolina (SC), Tennessee (TN), Utah (UT), Vermont (VT), Virginia (VA), Wisconsin (WI), and Wyoming (WY).

What is the NCI In-Person Survey?

The NCI Adult In-Person Survey is a face-to-face meeting conducted with a person who is receiving services from the state; it is used to gather data on approximately 60 consumer outcomes, and it is regularly refined and tested to ensure that it is valid and reliable. Surveyors meet with individuals to ask questions about where they live and work, the kinds of choices they make, the activities they participate in within their communities, their relationships with friends and family, and their health and well-being.

Information contained in this report come from three distinct survey sections:

1. **Background Information.** This section consists of questions about demographics, residence, health, employment status, and services and supports. Data is generally collected from state records, case managers, or a combination of both.
2. **Section I.** This section attempts to determine the individual's level of satisfaction and opinions. It may only be completed through a direct meeting with the individual.
3. **Section II.** This section contains questions that are answered by a direct meeting with the individual when possible. If the person is unable to respond, a proxy who knows the person well may be used. Case managers or service coordinators are not allowed to respond to these questions on the individual's behalf.

What topics are covered by the survey?

The National Core Indicators are organized by “domains” or topics. These domains are further broken down into sub-domains, each of which has a statement that indicates the concerns being measured. Each sub-domain includes one or more “indicators” of how the state performs in this area. The tables on the following page lists the domains, sub-domains, and concern statements addressed by the NCI Adult In-Person Survey indicators.

Individual Outcomes Domain

Sub-domain	Concern Statement
Work	People have support to find and maintain community integrated employment.
Community Inclusion, Participation and Leisure	People have support to participate in everyday community activities.
Choice and Decision-Making	People make choices about their lives and are actively engaged in planning their services and supports.
Self Determination	People have authority and are supported to direct and manage their own services.
Relationships	People have friends and relationships.
Satisfaction	People are satisfied with the services and supports they receive.

Health Welfare and Rights Domain

Sub-domain	Concern Statement
Safety	People are safe from abuse, neglect, and injury.
Health	People secure needed health services.
Medications	Medications are managed effectively and appropriately.
Wellness	People are supported to maintain healthy habits.
Respect/Rights	People receive the same respect and protections as others in the community.

System Performance Domain

Sub-domain	Concern Statement
Service Coordination	Service coordinators are accessible, responsive, and support the person's participation in service planning.
Access	Publicly funded services are readily available to individuals who need and qualify for them.

How were people selected to participate?

In California, based on the total number of adults (age 18 and over) who are receiving DDS services, it was determined that a target number of 400 surveys per regional center would provide a valid sample for this analysis.⁴ People who were presently living in a developmental center were not part of the sample. An additional group of people who had moved from developmental centers to the community in the past five years was selected so that their results could be looked at separately.⁵ Overall, the total number of surveys completed across the State of California was 8,280.

All states that comprise the NCI Average were instructed to attempt to complete a minimum of 400 surveys with a random sample of individuals age 18 or older who are receiving at least one publicly funded service besides case management. A sample size of 400 allows valid comparisons to be made across states with a 95% confidence level and a +/- 5% margin of error. States that do not complete a sample that reaches the 95% confidence level and 5% margin of error (based on the size of the total sample frame) are not included in NCI reporting. Both the confidence level (95%) and margin of error (5%) used are widely accepted for reviewing results, regardless of population size. Most states draw a sample greater than 400 to account for refusals and inaccurate contact information.

For more information on sampling, please see Appendix C of Part II of the NCI National In-Person Survey Outcomes Final Report, accessible at

https://www.nationalcoreindicators.org/upload/core-indicators/17-18_IPS_National_Report_PART_II.pdf.

Proxy Respondents

Proxy responses are allowed only for Section II (Community Inclusion, Choices, selected Respect/Rights items, and Access to Needed Services), which is based on objective measures. Proxy respondents are used only when the individual receiving services cannot complete the survey or chooses to have a proxy respondent. Only people who know the individual well – such as family, friends, or staff – are acceptable respondents. To avoid conflict of interest, service coordinators are not allowed to provide proxy responses for individuals on their caseloads.

⁴ A randomly selected group of 400 people meets the accepted standard for a representative sample with a +/-5% margin of error and a 95% confidence level. For additional details on sampling and administration methods, please see the California Statewide Adult In-Person Survey Report FY 17/18.

⁵ A supplemental Movers report will be produced by UC Davis and made available on the DDS website.

Data Analysis

All individuals selected in the survey sample are given an opportunity to participate in a face-to-face meeting. There are no prescreening procedures. Exclusion of responses occurs at the time of data analysis by HSRI, based on the criteria described below. There is no threshold number of answers to be given for a survey to be considered complete.

Surveys are excluded from analysis of questions occurring in Section I if:

1. The surveyor indicated that the individual receiving supports did not respond validly to questions in Section I.
2. All questions in Section I were missing or marked n/a or Don't Know.

Surveys are excluded from analysis of questions occurring in Section II if:

1. The individual receiving supports was marked as the respondent to all questions in Section II but Section I was deemed invalid (for one of the reasons above).
2. No questions were answered in Section II. Individual questions left blank or marked 'not applicable' are not included in analysis. For outcome data 'don't know' responses were excluded from analysis.

For all items shown, regional centers receive an 'n/a' designation in table presentations for a survey item if fewer than 20 people responded; however, their data are included in the CA Average.

Weighting

Prior to 2016-17, the NCI average was calculated as the simple arithmetic mean of all state means (an approach known as "average of averages"). Beginning last year, the approach was enhanced to take into account the relative numbers of people receiving services through participating states' systems. **The NCI averages contained in this report are "weighted" means.** Applying statistical weights allows a state that provides services to a larger number of people (but is represented in the data by a sample of the same size as other states) to have a higher influence on the overall NCI average—that is, the state's contribution to

the NCI average is proportional to its service population. The weights used in calculations for this report were developed using each participating state's number of survey respondents and its total survey-eligible population.⁶

When a state's sampling strategy is to identify and interview survey participants using simple random sampling or proportional stratified random sampling, each completed survey in the state gets assigned the same weight. In some cases, when a state's sampling strategy departs markedly from simple random or proportional, it may be necessary for completed surveys in the state to be assigned different weights based on which sampling strata they correspond to. For example, if a state intentionally oversampled one or more of its sub-populations or geographical regions to be disproportionately represented in the survey sample, it may be necessary to develop and apply different weights for surveys completed in those sub-populations or regions. **The CA Average is weighted** because the state intentionally sampled by regional center. The procedure for calculating weights is similar but uses the number of completed surveys and service population sizes in each regional center separately.⁷

Limitations of Data

The NCI Adult In-Person Survey tool is not intended to be used for monitoring individuals or providers; instead, it assesses system-wide performance. The NCI Average should not be interpreted as necessarily defining “acceptable” levels of performance or satisfaction. Instead, it describes average levels of performance or satisfaction across the states. It is up to public managers, policy-makers, and other stakeholders to decide what is an acceptable or unacceptable result (i.e., scale score or percentage of individuals achieving the indicated outcome).

IMPORTANT NOTE ON ANALYSIS. In examining the results that comprise the NCI Average, we found questions for which 25% or more of an individual state's sample were marked “don't know” or were missing data. NCI averages that include data from states with 25% or more “don't know” or missing data are noted throughout the report.

The quantity of missing data can be a result of several factors. We do not know whether the data are missing systematically or randomly; for example, for a specific state, are the data missing across the board for those in a specific waiver? If so, the resulting data are not representative of the entire sample or population. We advise caution when examining data that are indicated as having high rates of “missing” or “don't know” responses.

⁶ For more information on weighting, see the Data Analysis section of the California Statewide Adult In-Person Survey Report FY 17/18.

⁷ For more information on weighting, see the Data Analysis section of the California Statewide Adult In-Person Survey Report FY 17/18.

Also critical to note is that differences by state in requirements for eligibility for DD services may also be reflected in differences in the NCI data.

What is contained in this report?

This report illustrates the 2017-18 NCI Adult In-Person Survey demographic and outcome regional center results compared to the California Statewide (CA) and NCI (NCI) averages. All results are shown first in charts and then in table form. For most items, the total number of respondents (N) from the regional center, state and across NCI states is displayed in charts and tables. Results from regional centers with fewer than 20 responses to a question are not displayed, however data are included in the NCI Average.

Individual break-outs by regional center can be found in the California Statewide Adult In-Person Survey Report FY 17/18.

Individual break-outs by state and national data results for this survey can be found online at https://www.nationalcoreindicators.org/upload/core-indicators/17-18_IPS_National_Report_PART_I_3_20_19.pdf

Demographics

This section presents descriptive information of individuals surveyed.

Important Note on Missing Data:

For several states included in the NCI Average, survey items in the Background Information section (including certain items related to Demographics, Health, Medication, and Wellness) had a large amount of missing data or data recorded as “don’t know.” Detailed information by state can be found in the NCI National In-person Survey Report: <https://www.nationalcoreindicators.org/resources/reports/>

The quantity of missing data can be a result of several factors. We do not know whether the data are missing systematically or randomly; for example, are data missing across the board for those in a specific waiver population in a given state? If so, the resulting data are not representative of the entire sample or population. We advise caution when examining data that are indicated as having high rates of “missing” or “don’t know” responses. Please note that the NCI average reflects the average of data that were reported to NCI and may not be reflective of the service population across the country.

All CA and NCI Averages are weighted. For more information on weighting see the Data Analysis section of the California Statewide Adult In-Person Survey Report FY 17/18.

Table 1. Age

Work

People have support to find and maintain community integrated employment.

NCI reports on four types of community jobs:

1. Individual job without publicly funded supports—an individual job in which the person does not receive state or other funded supports;
2. Individual job with publicly funded supports—an individual job in which the person receives state or other funded supports;
3. Group-supported—a job that takes part in an integrated setting but is done with a group of individuals with disabilities (e.g., work crew). Group-supported jobs may or may not receive publicly funded supports; and
4. *New in 2017-18:* Community job in a business that primarily hires people with disabilities—a job where the employees with disabilities interact with the non-disabled population; this job is not in a traditional sheltered workshop and is NOT an enclave.

Important Note on Missing Data:

For several states included in the NCI Average, survey items in the Background Information section (including certain items related to Demographics, Health, Medication, and Wellness) had a large amount of missing data or data recorded as “don’t know.” Detailed information by state can be found in the NCI National In-person Survey Report: <https://www.nationalcoreindicators.org/resources/reports/>

The quantity of missing data can be a result of several factors. We do not know whether the data are missing systematically or randomly; for example, are data missing across the board for those in a specific waiver population in a given state? If so, the resulting data are not representative of the entire sample or population. We advise caution when examining data that are indicated as having high rates of “missing” or “don’t know” responses. Please note that the NCI average reflects the average of data that were reported to NCI and may not be reflective of the service population across the country.

All CA and NCI Averages are weighted. For more information on weighting see the Data Analysis section of the California Statewide Adult In-Person Survey Report FY 17/18.

Health

People secure needed health services.

Important Note on Missing Data:

For several states included in the NCI Average, survey items in the Background Information section (including certain items related to Demographics, Health, Medication, and Wellness) had a large amount of missing data or data recorded as “don’t know.” Detailed information by state can be found in the NCI National In-person Survey Report: <https://www.nationalcoreindicators.org/resources/reports/>

The quantity of missing data can be a result of several factors. We do not know whether the data are missing systematically or randomly; for example, are data missing across the board for those in a specific waiver population in a given state? If so, the resulting data are not representative of the entire sample or population. We advise caution when examining data that are indicated as having high rates of “missing” or “don’t know” responses. Please note that the NCI average reflects the average of data that were reported to NCI and may not be reflective of the service population across the country.

All CA and NCI Averages are weighted. For more information on weighting see the Data Analysis section of the California Statewide Adult In-Person Survey Report FY 17/18.
