Quality Assessment Project and National Core Indicators™

This report contains regional center level results from California’s statewide National Core Indicators™ (NCI™) Child Family Survey (CFS) data collection from fiscal year 2018-19 (FY 18/19) in accordance with Welfare and Institutions Code (WIC), Section 4571. This law directs the Department of Developmental Services (DDS) to collect accurate, reliable, and valid consumer and family satisfaction measures as well as individual outcome data. Data from this project is used to review and benchmark developmental disability service system performance, statewide and by regional center.¹ This report compares North Los Angeles County Regional Center (NLACRC) with California statewide and NCI averages. Regional centers can use this report to help guide strategic planning and monitor systemic changes.

What is NCI?

The National Core Indicators (NCI) program is a voluntary effort by state developmental disability agencies to track their performance using a standardized set of consumer and family/guardian surveys with nationally validated measures. The effort is coordinated by the National Association of State Directors of Developmental Disabilities Services (NASDDDS) and the Human Services Research Institute (HSRI).

In 2018-19 a total of 46 states, the District of Columbia and 22 sub-state entities participated in NCI.

Where are the statistics in this report from?

This report includes regional center, California statewide and NCI averages from the National Core Indicators™ 2018-19 Child Family Survey (CFS). The CA averages are comprised of 10,630 valid surveys collected across the 21 regional centers.

Note: All qualified Californians with a developmental disability have both a civil right and an individual entitlement to receive services from the California Department of Developmental Services. California law mandates that the intake process begin within 15 days of an individual’s or family’s request for services and that the Department of Developmental Services begin providing services within 120 days after intake. These statutory requirements make California’s service system unique and could impact comparisons between its survey results and the results of other states.

NCI averages are weighted; they are comprised of 14,816 valid surveys collected across 12 states: AZ, CA, CO, LA, MN, MO, NC, OH, OR, SD, WA and WI.

To ensure confidentiality, regional center outcomes with fewer than 20 respondents are denoted in charts and tables as “n/a”; their data are still included in the CA average.

¹ Refer to the California Statewide Child Family Survey Report FY 18/19 for information about Quality Assessment Project implementation, NCI and California’s statewide results.

What is the NCI Child Family Survey?

The NCI Child Family Survey is used to gather data on family outcomes. It is mailed to families who have a child² who *lives with* the respondent and receives at least one service other than case management from the regional center³. The survey collects demographic information on both the child receiving services ('child') as well as the person who fills out the survey (the 'respondent') and information on services and supports received. The survey is continually refined and tested to ensure it is valid and reliable.

Important note on responses: All data are reported by the respondent based on their understanding of their child's demographics, diagnoses and personal characteristics.

What is included in this report?

This report includes this regional center's Child Family Survey data compared to the California statewide (CA) and NCI averages.

The charts in this document, grouped by subdomain, display the state results alongside the average across states (NCI average). The charts are followed by accessible tables containing the same information.

To find out more about the development of the Child Family Survey, data analysis and state samples, check out the National Child Family Report: <https://www.nationalcoreindicators.org/resources/reports/#reports-family-survey-final-reports>. To find out more about California's administration of the Child Family Survey refer, to the California Statewide Child Family Survey Report FY 18/19 on the DDS website: <https://www.dds.ca.gov/rc/nci/>.

This report also contains 10 questions that California specifically requested be added. These questions are noted as "CA specific question" and for which there is no NCI comparison data. For those questions, the NCI Average is reported as "n/a".

² A Child Family Survey could be completed for an individual up to 22 years if still receiving "child" services.

³ NCI Averages include states that provide services through a central IDD Agency

Child Family Survey Results

Information and Planning Charts

Families and children with disabilities have the information and support necessary to plan for their services and supports.

Do you get enough information to take part in planning services for your child?

Is the information you get about services and supports easy to understand?

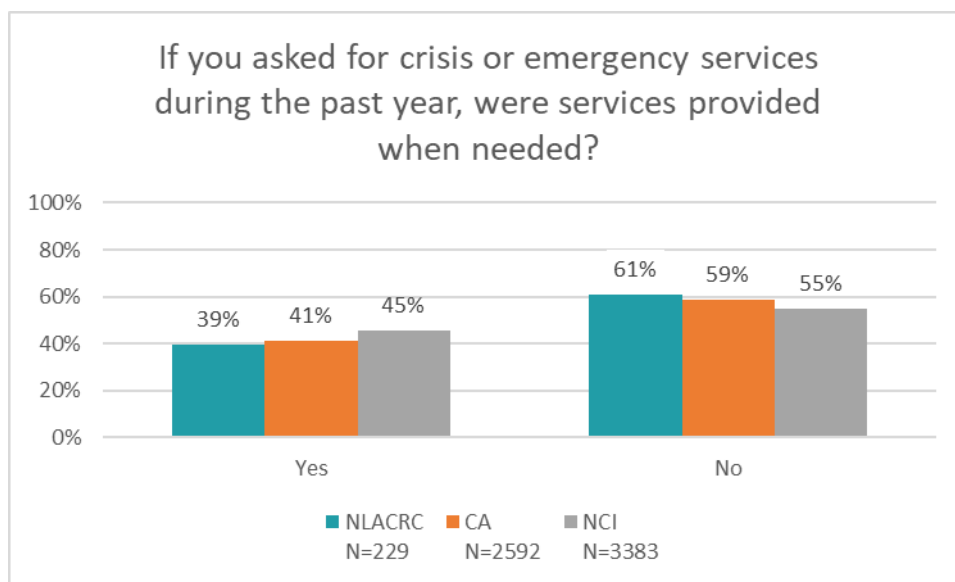

Does the case manager/service coordinator respect your family's choices and opinions?

Do you have enough information about other public services for which your family is eligible?

Does the IPP/IFSP include all the services/supports your child needs?

Does your child get all services listed in the IPP/IFSP?

Did you or another family member help make the IPP/IFSP?

Did your child with a disability help make the IPP/IFSP?

Did you get a copy of your child's IPP/IFSP in your preferred language?

Did you discuss how to handle emergencies at your child's last IPP/IFSP meeting?

Does your child have a transition plan?

Did you help make the transition plan?
