Back-to-Basics

Common Terms/Acronyms

EVV – Electronic visit verification (EVV) is a telephone- and computer-based system that electronically verifies when in-home visits occur

PCS – Personal care services

HHCS – Home health care services

CalEVV Solution – EVV State supplied EVV collection system

Alternate EVV Solution – An EVV collection system selected by a provider agency other than from the CalEVV solution

CalEVV Aggregator – The system that collects and stores all EVV records from provider agencies

EVV is a Federal Requirement

The Federal 21st Century CURES Act requires that States set up a telephone- and computer-based system that electronically verifies when personal care and home health care services are provided in the home.

EVV solutions must electronically verify 6 data points:

- Type of service performed
- Individual receiving the service
- Date of the service
- Location of service delivery
- Person providing the service
- Time the service begins and ends

EVV in CA: Open Vendor Model Approach

Service providers have a choice in how they collect EVV data

- Use the State's solution (**CalEVV**)
- Use their own solution (**Alternate EVV Solution**)

All EVV solutions are required to

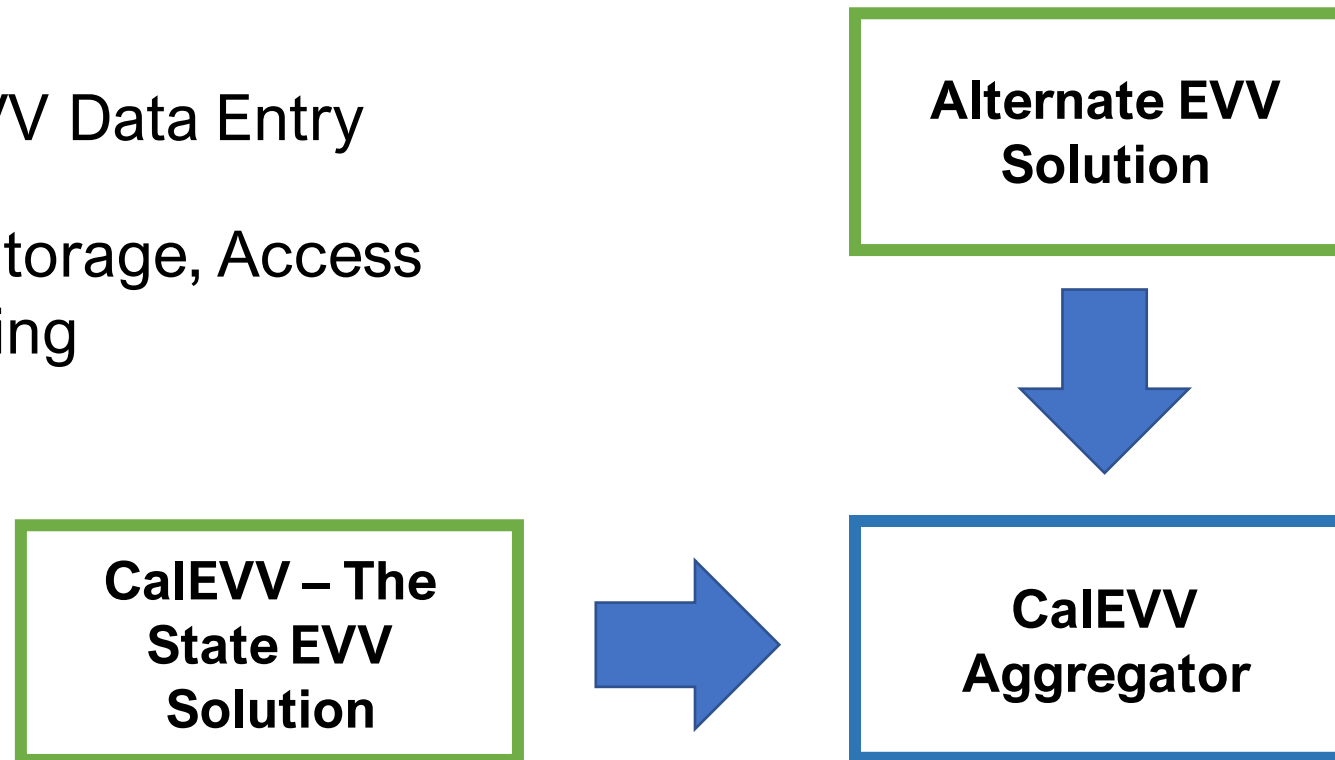

- Electronically capture the 6 data points
- Transmit the 6 data points to the State's CalEVV Aggregator

Providers indicate their EVV solution choice when they complete self-registration.

All providers must complete self-registration.
