Message from the California Department of Developmental Services

Mission: The Department of Developmental Services (DDS) is committed to providing leadership that results in quality services to the people of California and assures the opportunity for individuals with developmental disabilities to exercise their right to make choices.

The NCI-IDD In-Person Survey (IPS) report was compiled by Human Services Research Institute (HSRI) in accordance with Welfare and Institutions Code (WIC), Section 4571. It is an important effort to collect accurate, reliable, and valid individual and family satisfaction measures, as well as individual outcome data. More information about the California NCI-IDD can be found at <http://www.dds.ca.gov/QA/>.

This is the sixth administration of the CA In-Person Survey, with data collected from July 2022 through June 2023. During that time, 8,830 face-to-face surveys were completed with adults with intellectual and developmental disabilities receiving at least one service beyond case management from a regional center. The data findings in this report contribute to our understanding of how California's system is performing. California uses these reports to monitor changes in the system and to guide strategic planning and quality improvement activities. Regional centers can use the data in a similar fashion at the local level.

This report does not compare California's data to the data of other states, but it does include the NCI average across participating NCI states. This is because California's DDS service system is unique among states. Some of the things that make California's service system unique include:

1. California has longstanding statute that ensures services and supports are provided for eligible persons with intellectual and developmental disabilities.
2. California's laws mandate intake, evaluation, and assessment within 120 days.
3. California has a broad eligibility definition for receiving services.
4. California has mandated services, including case management, with statutory limitations on caseload size.
5. California's service obligations to the families needing services are, by law, from pre-conception to death.
6. California's regional centers are, by design, autonomous in that each center has a local board of directors to best address the unique needs of each of the 21 regions.
7. Consumers or their families can call a team meeting at any time to request a change in service.

Reports like this offer DDS the opportunity to compare the results of the data across the years. System improvements will take time to identify and achieve, but this report provides valuable data and is one more tool in our continuous effort to improve services and supports to individuals with intellectual and developmental disabilities across California.

The NCI-IDD average is weighted. Regional Centers receive an 'n/a' designation within the table if 20 or fewer people responded to the survey item; however, their data are included in the Weighted CA Average.

Acknowledgements

This report would not be possible if not for the 8830 individuals who agreed to offer their time and discuss their lives in order to assist in improving the services of all people with intellectual/ developmental disabilities in California. Additionally, a special mention goes to the families, friends, and staff members who participated in the survey process.

The NCI-IDD average is weighted. Regional Centers receive an ‘n/a’ designation within the table if 20 or fewer people responded to the survey item; however, their data are included in the Weighted CA Average.

Quality Assessment Project and National Core Indicators®- Intellectual and Developmental Disabilities

This report contains regional center level results from California's statewide National Core Indicators®-Intellectual and Developmental Disabilities (NCI®-IDD) In-Person Survey (IPS) data collection from fiscal year 2022-23 (FY 22/23) in accordance with Welfare and Institutions Code (WIC), Section 4571. WIC, Section 4571 directs the Department of Developmental Services (DDS) to collect accurate, reliable, and valid consumer and family satisfaction measures as well as individual outcome data. In California, data from this project will be used to review and benchmark statewide and regional center developmental disability service system performance. This report shows this regional center compared to the California statewide and NCI-IDD averages. Regional centers can use this report to help guide strategic planning and monitor systemic changes.

What is National Core Indicators® – Intellectual and Developmental Disabilities (NCI-IDD)?

The National Core Indicators® – Intellectual and Developmental Disabilities (NCI-IDD) program is a voluntary effort by state developmental disability agencies to track their performance using a standardized set of consumer and family/guardian surveys with nationally validated measures. The effort is coordinated by the National Association of State Directors of Developmental Disabilities Services (NASDDDS) and the Human Services Research Institute (HSRI).

What is the NCI-IDD In-Person Survey?

The NCI-IDD In-Person Survey is completed with adults with IDD age 18 and older receiving at least one paid service (in addition to case management) from the state I/DD (Intellectual / Developmental Disabilities) service system. The survey instrument includes a “Background Information Section”, which gathers data about the consumer from agency records, and an In-Person Survey that is conducted face-to-face with the person receiving services, either in person or via videoconference. The In-Person Survey is composed of two sections: Section I includes subjective questions that can only be answered by the person receiving services from the state. Section II includes objective, fact-based questions that can be answered by the person or, if needed, a proxy respondent who knows the person well.

The NCI-IDD average is weighted. Regional Centers receive an 'n/a' designation within the table if 20 or fewer people responded to the survey item; however, their data are included in the Weighted CA Average.

Where are the statistics in this report from?

Thirty-three (33) states administered the In-Person Survey (IPS) in 2022-23 collected a valid sample for analysis. Together they contribute 25,424 surveys. Each of the 21 California regional centers collected a valid sample for analysis. Together they contributed 8830 surveys.

The charts in this document, grouped by subdomain, display the regional center results alongside the weighted CA and NCI-IDD averages. The charts are followed by accessible tables containing the same information. Many questions in the IPS allow respondents to answer a question with “middle” response like “maybe”, “sometimes” or “in-between”. Data in this report are “collapsed” data. That means that two or more response options are grouped together if they are considered to reflect a positive outcome. The CA and NCI-IDD averages are “weighted” to reflect the regional centers’ and states’ relative population and sample sizes. We created the weights using the regional centers’ and state’s number of valid surveys and its total survey-eligible population. This way, a regional center or state that provides services to a larger number of people but uses a sample similar in size to other regional centers or states has a greater influence on the overall state or NCI-IDD average (that is, its contribution is proportional to its service population).

Regional Centers receive an ‘n/a’ designation within the table if 20 or fewer people responded to the survey item; however, their data are included in the CA Average. Some items collected from the Background Information section were not available in CA records and could not be collected during the survey interview, those outcomes are designated as ‘n/a’ at the statewide and regional center levels. To find out more about the development of In-Person Survey, data analysis and state samples, check out the National In-Person Report: <https://idd.nationalcoreindicators.org/survey-reports-insights/report-library/>.

Results

In California, the In-Person Survey is administered once every other year and data are collected from all 21 regional centers. The California statewide average is comprised of this data. **Please note: the NCI-IDD average (noted as just “NCI-IDD” in the tables) and CA averages (noted as “CA”) shown throughout this report are weighted.**

Respondents of this survey are adults who have IDD and receive at least one service in addition to case management from the state DD service system. More NCI data findings are available at <https://www.dds.ca.gov/rc/nci/>.

The NCI-IDD average is weighted. Regional Centers receive an ‘n/a’ designation within the table if 20 or fewer people responded to the survey item; however, their data are included in the Weighted CA Average.

Presentation of Demographics

The following section details the demographic profile of individuals included in the 2022-23 In-Person Survey. Tables display demographic results listed alphabetically by regional center, followed by the *weighted* CA and NCI-IDD averages.

Regional Centers receive an 'n/a' designation within the table if 20 or fewer people responded to the survey item; however, their data are included in the CA Average. Some items collected from the Background Information section were not available in CA records and could not be collected during the survey interview. Those outcomes are not included in this report.

Regional centers with fewer than 20 respondents to a question **are not** included in outcome tables; however, their data **are** included in the CA Average.

Note on NCI Averages: The NCI-IDD averages and CA averages contained in this report are “weighted” means; their calculations reflect the relative population sizes of participating states and the states’ sample sizes. See more about weighting in the Methodology section.

“N” demonstrates the number of valid responses for each question. “N” can vary between questions. The N does not include missing responses, “don’t know” responses or “not applicable” responses.

The NCI-IDD average is weighted. Regional Centers receive an 'n/a' designation within the table if 20 or fewer people responded to the survey item; however, their data are included in the Weighted CA Average.

Demographics

This section presents descriptive information of individuals surveyed.

For several states included in the NCI-IDD Average, survey items in the Background Information section (including certain items related to Demographics, Health, Medication, and Wellness) had a large amount of missing data or data recorded as “don’t know.” Detailed information by state can be found in the NCI-IDD National In-Person Survey Report: <https://idd.nationalcoreindicators.org/survey-reports-insights/>.

The quantity of missing data can be a result of several factors. We do not know whether the data are missing systematically or randomly; for example, are data missing across the board for those in a specific waiver population in a given state? If so, the resulting data are not representative of the entire sample or population. Please note that the NCI-IDD average reflects the average of data that were reported to NCI-IDD and may not be reflective of the service population across the country.

All CA statewide and NCI-IDD averages are weighted. For more information on weighting see the Data Analysis section of this report.

The NCI-IDD average is weighted. Regional Centers receive an ‘n/a’ designation within the table if 20 or fewer people responded to the survey item; however, their data are included in the Weighted CA Average.
